

How do I upgrade the device firmware?

Solution:

1. Strictly recommended to connect the router wired to the PC
2. Open a web browser such as Internet Explorer or Mozilla Firefox and enter the IP address of your router ((default IP and login credentials will be found on the device label)).
3. Enter the username (admin) and password admin (or as mentioned on the device label) and click login
4. Click on the Maintenance Tab
5. Click on Firmware Upgrade
6. Click on browse and select the appropriate firmware file on your local system
7. Click on the "Update Firmware / Upload"
8. Wait patiently till the procedure is complete and the device reboots
9. Check the Status > firmware version to confirm if the upgrade is successfully completed.

Note: Do not turn off your device or press the Reset button when the firmware upgrade procedure is in progress.
