Safety and Regulatory

Audience

This guide is for the networking professional managing the standalone DG-GS4112 switch. It is recommended that only professionals with experience working with Intelligent Technology INC. networking devices who are familiar with the Ethernet and local area networking terminology, should service the equipment.

Conventions

The following conventions are used in this manual to convey instructions and information:

Command descriptions use these conventions:

- Commands and keywords are in boldface text.
- Arguments for which you supply values are in italic.
- Square brackets ([]) mean optional elements.
- Braces ({ }) group required choices, and vertical bars (|) separate the alternative elements.
- Braces and vertical bars within square brackets ([{ | }]) mean a required choice within an optional element.

Interactive examples use these conventions:

- Non-printing characters, such as passwords or tabs, are in angle brackets (< >). Notes and cautions use the following conventions and symbols:

Note

Means additional information. Notes contain additional useful information or references to material available outside of this document.

Caution

Indicates that the reader must be careful. In a situation where a Caution is listed, a user may cause equipment damage or loss of data.

1. Introduction

Thank you for choosing a Digisol L2 Managed Switch. This device is designed to be operational right out-of-the-box as a standard bridge. In the default configuration, it will forward packets between connecting devices after powered up.

Before you begin installing the switch, make sure you have all of the package contents available, and a PC with a web browser for using web-based system management tools.

1.1. Overview

The Digisol DG-GS4112 is a L2 Managed switch with 12 Gigabit+ ports respectively.

1.2. Package contents

Before using the product, check that the items listed below are included and in good condition. If any item does not accord with the table, please contact your dealer immediately.

- Digisol DG-GS4112 L2 Managed Switch
- Quick Installation Guide
- Power Cord
- Manual CD
- Rack Mount Kit
- Foot pads
- Console Cable

1.3. Features

- Supports up to 12 10/100/1000Mbps Gigabit Ethernet ports and 4 SFP slots
- IEEE 802.1Q VLAN allows network segmentation to enhance performance and

security

- Supports Access Control List (ACL)
- Switch capacity: DG-GS4112: 24Gbps, Forwarding rate: 41.6Mpps
- Supports IGMP Snooping V1 / V2 / V3
- 8K MAC address table and 9K jumbo frames
- 19-inch rack-mountable metal case

1.4. Product Components

1.4.1. Ports

The following view applies to DG-GS4112.

Figure 1 - Front View

No.	Name	Description
1	10/100/1000Mbps RJ-45 ports (1 ~ 12)	Designed to connect to network devices with a bandwidth of 10Mbps, 100Mbps or 1000Mbps. Each has a corresponding 10/100/1000Mbps LED.
2	SFP ports (SFP1, SFP2, SFP3, and SFP4)	Designed to install SFP modules and connect to network devices with a bandwidth of 1000Mbps. Each has a corresponding 1000Mbps LED.

The following view applies to DG-GS4112.

Figure 2 - Rear View

No.	Name	Description
1	AC power in	Supports AC 100 – 240V, 50-60Hz.

1.4.2. LED Indicators

The following view applies to DG-GS4112.

Figure 3 - Front View LED Indicators

No.	Name	Description
1	Power	<ul style="list-style-type: none"> Off: power off On: power on
2	System	<ul style="list-style-type: none"> Off: system not ready On: system ready

3	Port LED	<p>LINK/ACT bi-color LED:</p> <ul style="list-style-type: none">• Off: port disconnected or link fail• Green on: 1000Mbps connected• Amber on: 10/100Mbps connected
4	SFP LED	<ul style="list-style-type: none">• Off: port disconnected or link fail• Green on: 1000Mbps connected

2. Installation

This chapter describes how to install and connect your Intelligent Technology INC. Switch. Read the following topics and perform the procedures in the correct order. Incorrect installation may cause damage to the product.

2.1. Mounting the Switch

There are two ways to physically set up the switch.

- Place the switch on a flat surface. To place the switch on a desktop, install the four rubber feet (included) on the bottom of the switch.
- Mount the switch in a standard rack (1 rack unit high).

2.1.1. Placement Tips

- Ambient Temperature—To prevent the switch from overheating, do not operate it in an area that exceeds an ambient temperature of 122°F (50°C).
- Air Flow—Be sure that there is adequate air flow around the switch.
- Mechanical Loading—Be sure that the switch is level and stable to avoid any hazardous conditions.
- Circuit Overloading—Adding the switch to the power outlet must not overload that circuit.

Follow these guidelines to install the switch securely.

1. Put the switch in a stable place such as a desktop, to avoid it falling.
2. Ensure the switch works in the proper AC input range and matches the voltage labeled.
3. Ensure there is proper heat dissipation from and adequate ventilation around the switch.
4. Ensure the switch's location can support the weight of the switch and its accessories.

Figure 4 - Desktop Installation

2.1.2. Rack Mounting

You can mount the switch in any standard size, 19-inch (about 48 cm) wide rack. The switch requires 1 rack unit (RU) of space, which is 1.75 inches (44.45 mm) high.

For stability, load the rack from the bottom to the top, with the heaviest devices on the bottom. A top-heavy rack is likely to be unstable and may tip over.

When mounting smaller switch products into a standard 19-inch rack, a pair of extension brackets (sometimes referred to as ears) are needed to adapt the switch to the rack size.

These extension brackets are mounted on the switch using the screws provided in the kit, and have two holes that are used to then screw the switch into the rack.

An example of one type of these extension brackets is shown in the following figure.

A common problem that occurs during rack mounting is the distance between the screw holes on the rack. Some racks are made with a uniform distance between all of the holes, and others have the holes organized into groups (see photo on the next page for an example).

When organized into groups, the switch must be placed in the rack so that the holes in the extension brackets line up correctly.

1. Align the mounting brackets with the mounting holes on the switch's side panels and secure the brackets with the screws provided.

Figure 5 - Bracket Installation

2. Secure the switch on the equipment rack with the screws provided.

Figure 6 - Rack Installation

3. Getting Started

This section provides an introduction to the web-based configuration utility, and covers the following topics:

- Powering on the device
- Connecting to the network
- Starting the web-based configuration utility

3.1. Power

3.1.1. Connecting to Power

Power down and disconnect the power cord before servicing or wiring a switch.

Do not disconnect modules or cabling unless the power is first switched off. The device only supports the voltage outlined in the type plate. Do not use any other power components except those specifically designated for the switch.

Disconnect the power cord before installation or cable wiring.

The switch is powered by the AC 100-240 V 50/60Hz internal high-performance power supply. It is recommended to connect the switch with a single-phase three-wire power source with a neutral outlet, or a multifunctional computer professional source.

Connect the AC power connector on the back panel of the switch to the external power source with the included power cord, and check the power LED is on.

Figure 7 - Rear View AC Power Socket

3.1.2. Connecting to the Network

To connect the switch to the network:

1. Connect an Ethernet cable to the Ethernet port of a computer
2. Connect the other end of the Ethernet cable to one of the numbered Ethernet ports of the switch. The LED of the port lights if the device connected is active.
3. Repeat Step 1 and Step 2 for each device to connect to the switch.

We strongly recommend using CAT-5E or better cable to connect network devices. When connecting network devices, do not exceed the maximum cabling distance of 100 meters (328 feet). It can take up to one minute for attached devices or the LAN to be operational after it is connected. This is normal behavior.

Connect the switch to end nodes using a standard Cat 5/5e Ethernet cable (UTP/STP) to connect the switch to end nodes as shown in the illustration below.

Switch ports will automatically adjust to the characteristics (MDI/MDI-X, speed, duplex) of the device to which the switch is connected.

Figure 8 - PC Connect

3.1.3. Starting the Web-based Configuration Utility

This section describes how to navigate the web-based switch configuration utility.

Be sure to disable any pop-up blocker.

Browser Restrictions

- If you are using older versions of Internet Explorer, you cannot directly use an IPv6 address to access the device. You can, however, use the DNS (Domain Name System) server to create a domain name that contains the IPv6 address, and then use that domain name in the address bar in place of the IPv6 address.
- If you have multiple IPv6 interfaces on your management station, use the IPv6 global address instead of the IPv6 link local address to access the device from your browser.

Launching the Configuration Utility

To open the web-based configuration utility:

1. Open a Web browser.
2. Enter the IP address of the device you are configuring in the address bar on the browser (factory default IP address is 192.168.1.10) and then press Enter.

When the device is using the factory default IP address, its power LED flashes continuously. When the device is using a DHCP assigned IP address or an administrator-configured static IP address, the power LED is lit a solid color. Your computer's IP address must be in the same subnet as the switch. For example, if the switch is using the factory default IP address, your computer's IP address can be in the following range: 192.168.1.x (whereas x is a number from 2 to 254).

After a successful connection, the login window displays.

The image shows a user login window with a red header bar. On the left side of the header is the DIGISOL logo, and on the right side is the text "User Login". Below the header, the main area is light pink. It contains two labels, "Username:" and "Password:", each followed by a white text input field. Below these fields is a blue button with the text "LOGIN".

Figure 9 - Login Window

3.1.4. Logging In

The default username is admin and the default password is admin. The first time that you log in with the default username and password, you are required to enter a new password.

To log in to the device configuration utility:

1. Enter the default user ID (admin) and the default password (admin).
2. If this is the first time that you logged on with the default user ID (admin) and the default password (admin) it is recommended that you change your password immediately. See "4.9.3. Administrator" on page 79 for additional information.

When the login attempt is successful, the **System Information** window displays.

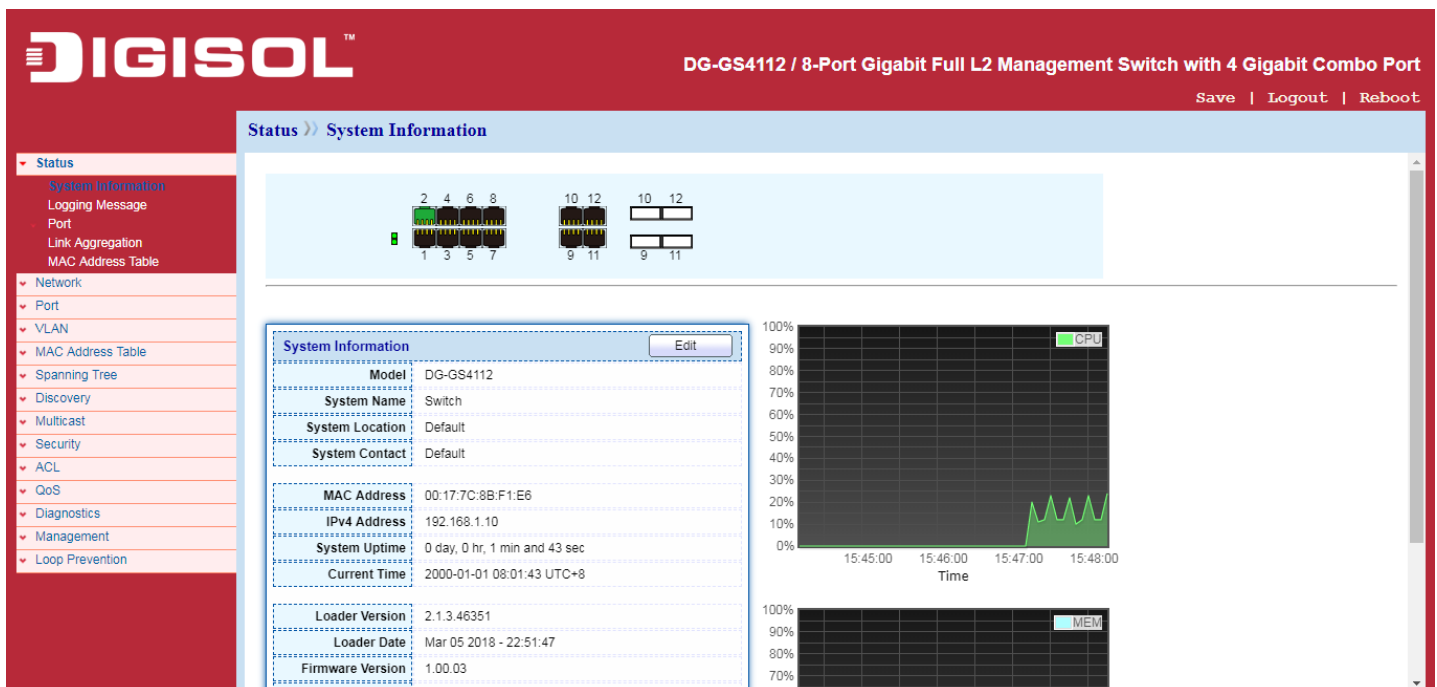

Figure 10 - System Information

If you entered an incorrect username or password, an error message appears and the Login page remains displayed on the window. If you are having problems logging in, please see the Launching the Configuration Utility section in the Administration Guide for additional information.

Logging Out

By default, the application logs out after ten minutes of inactivity.

To logout, click Logout in the top right corner of any page. The system logs out of the device.

When a timeout occurs or you intentionally log out of the system, a message appears and the Login page appears, with a message indicating the logged-out state. After you log in, the application returns to the initial page.

4. Web-based Switch Configuration

The switch software provides rich Layer 2 functionality for switches in your networks. This chapter describes how to use the web-based management interface (Web UI) to configure the switch's features.

For the purposes of this manual, the user interface is separated into four sections, as shown in the following figure:

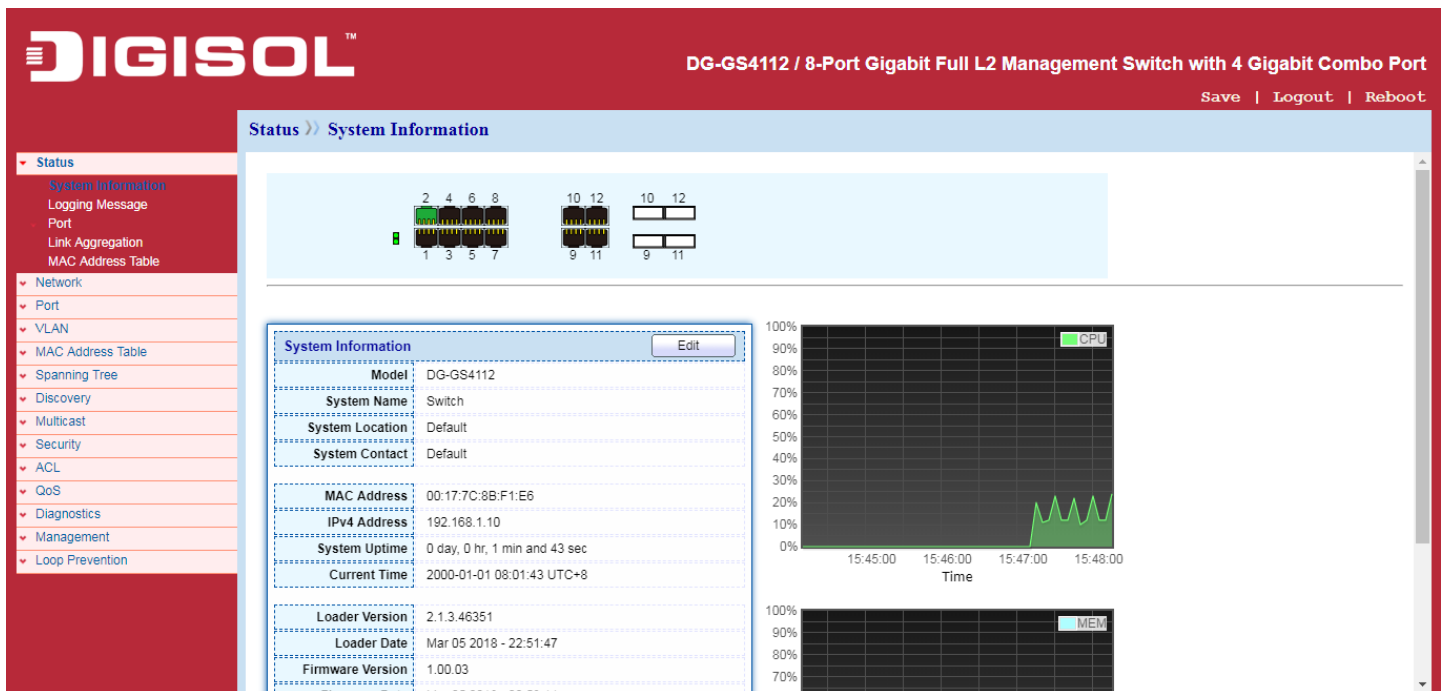

Figure 11 - User Interface

No.	Name	Description
1	Configuration menu	Navigate to locate specific switch functions.
2	Configuration settings	Edit specific function settings.
3	Switch's current link status	Green squares indicate the port link is up, while black squares indicate the port link is down.
4	Common toolbar	Provides access to frequently used settings.

4.1. Status

Use the Status pages to view system information and status.

4.1.1. System Information

This page shows switch panel, CPU utilization, Memory utilization and other system current information. It also allows user to edit some system information.

To display the Device Information web page, click **Status > System Information**.

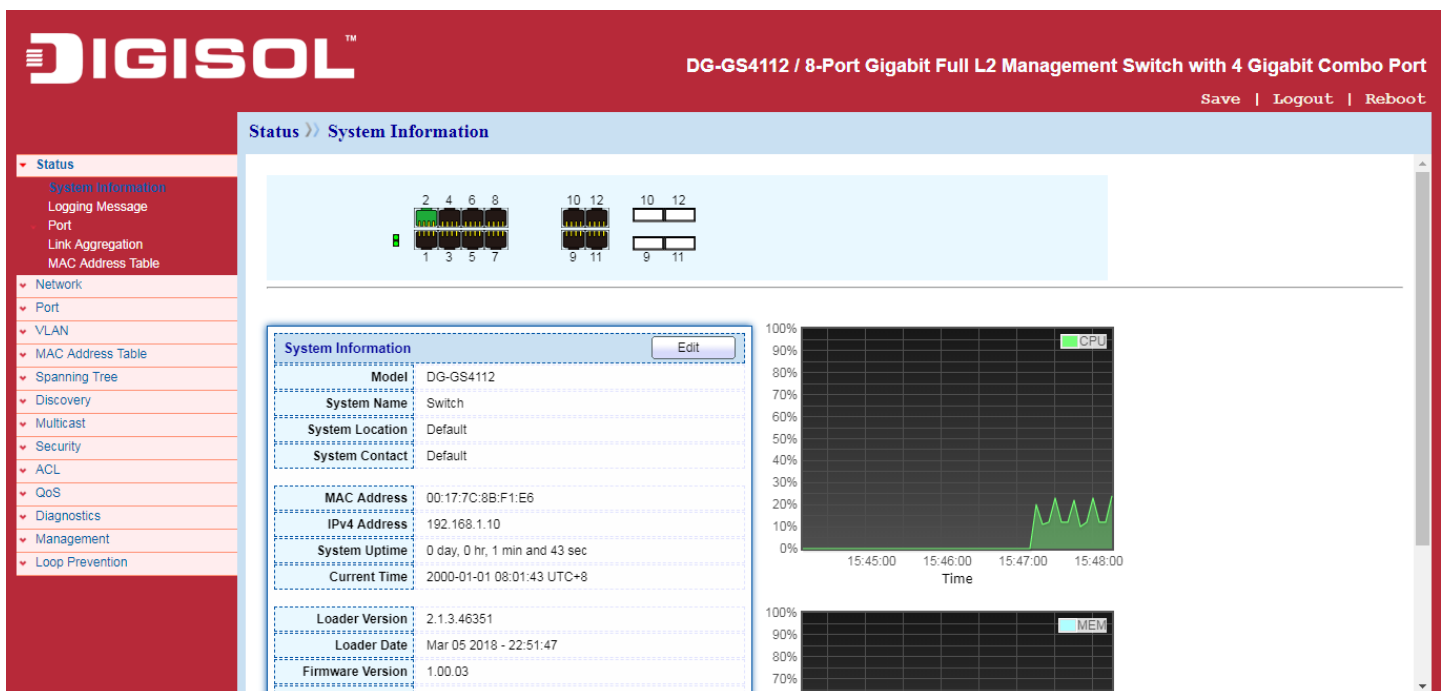

Figure 12 - Status > System Information

Item	Description
Model	Model name of the switch.
System Name	System name of the switch. This name will also use as CLI prefix of each line. ("Switch>" or "Switch#").
System Location	Location information of the switch.
System Contact	Contact information of the switch.
MAC Address	Base MAC address of the switch.
IPv4 Address	Current system IPv4 address.

System OID	SNMP system object ID.
System Uptime	Total elapsed time from booting.
Current Time	Current system time.
Loader Version	Boot loader image version.
Loader Date	Boot loader image build date.
Firmware Version	Current running firmware image version.
Firmware Date	Current running firmware image build date.
Telnet	Current Telnet service enable/disable state.
SSH	Current SSH service enable/disable state.
HTTP	Current HTTP service enable/disable state.
HTTPS	Current HTTPS service enable/disable state.
SNMP	Current SNMP service enable/disable state.

Click “Edit” button on the table title to edit following system information.

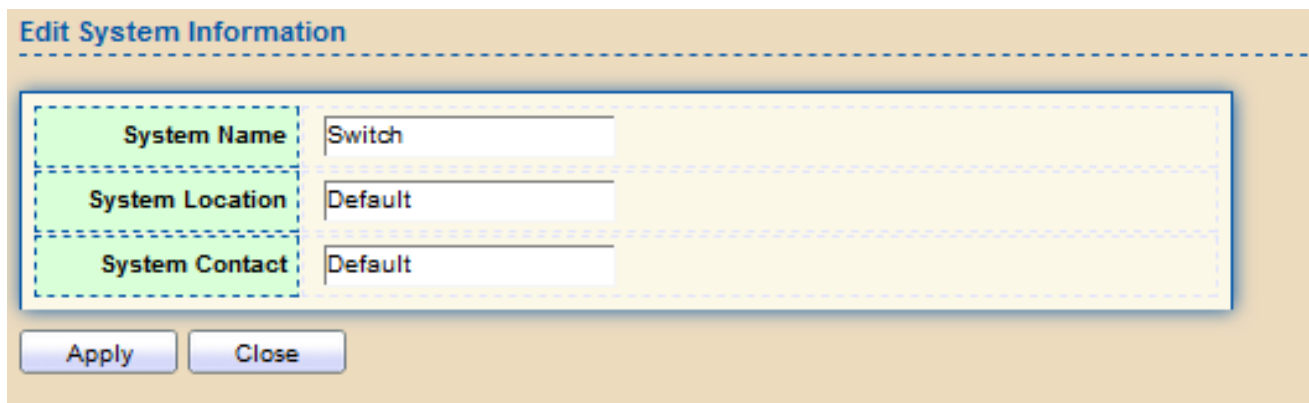

Figure 13 - Status > System Information > Edit System Information

Item	Description
System Name	System name of the switch. This name will also use as CLI prefix of each line. (“Switch>” or “Switch#”).
System Location	Location information of the switch.
System Contact	Contact information of the switch.

4.1.2. Logging Message

To view the logging messages stored on the RAM and Flash, click **Status > Logging Message**.

Logging Message Table

Viewing RAM

4.1.3. Port

The Port configuration page displays port summary and status information.

4.1.3.1. Statistics

This page displays standard counters on network traffic from the Interfaces, Ethernet -like and RMONMIB. Interfaces and Ethernet-like counters display errors on the traffic passing through each port. RMON counters provide a total count of different frame types and sizes passing through each port. The “Clear” button will clear MIB counter of current selected port.

To display the Port Flow Chart web page, click **Status > Port > Statistics**.

Recover	Recover the selected port status.

4.1.3.3. Bandwidth Utilization

This page allow user to browse ports' bandwidth utilization in real time. This page will refresh automatically in every refresh period.

To display Bandwidth Utilization web page, click **Status > Port > Bandwidth Utilization**.

Figure 17 - Status > Port > Bandwidth Utilization

Item	Description
Refresh Rate	Refresh the web page every period of seconds to get new bandwidth utilization data.

4.1.4. Link Aggregation

To display the Link Aggregation web page, click **Status > Link Aggregation**.

Link Aggregation Table

LAG	Name	Type	Link Status	Active Member	Inactive Member
LAG 1		---	---		
LAG 2		---	---		
LAG 3		---	---		
LAG 4		---	---		
LAG 5		---	---		
LAG 6		---	---		
LAG 7		---	---		
LAG 8		---	---		

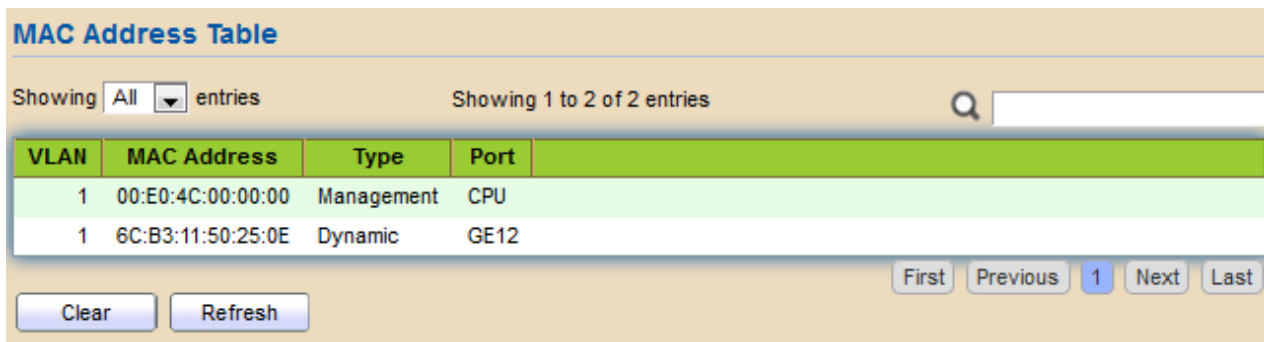

Figure 18 - Status > Link Aggregation

Item	Description
LAG	LAG Name.
Name	LAG port description.
Type	<ul style="list-style-type: none"> The type of the LAG. Static: The group of ports assigned to a static LAG are always active members. LACP: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.
Link Status	LAG port link status.
Active Member	Active member ports of the LAG.
Inactive Member	Inactive member ports of the LAG.

4.1.5. MAC Address Table

The MAC address table page displays all MAC address entries on the switch including static MAC address created by administrator or auto learned from hardware. The “Clear” button will clear all dynamic entries and “Refresh” button will retrieve latest MAC address entries and show them on page.

To display the MAC Address Table web page, click **Status > MAC Address Table**.

VLAN	MAC Address	Type	Port
1	00:E0:4C:00:00:00	Management	CPU
1	6C:B3:11:50:25:0E	Dynamic	GE12

Figure 19 - Status > MAC Address Table

Item	Description
VLAN	VLAN ID of the mac address.
MAC Address	MAC address.
Type	<p>The type of MAC address</p> <ul style="list-style-type: none"> Management: DUT' s base mac address for management Purpose. Static: Manually configured by administrator
Port	<p>The type of Port</p> <ul style="list-style-type: none"> CPU: DUT' s CPU port for management purpose. Other: Normal switch port.

4.2. Network

Use the Network pages to configure settings for the switch network interface and how the switch connects to a remote server to get services.

4.2.1. IP Address

This section allows you to edit the IP address, Netmask, Gateway and DNS server of the switch.

To view the IP Address menu, navigate to **Network > IP Address**.

IPv4 Address	
Address Type	<input checked="" type="radio"/> Static <input type="radio"/> Dynamic
IP Address	192.168.169.1
Subnet Mask	255.255.255.0
Default Gateway	192.168.169.254
DNS Server 1	168.95.1.1
DNS Server 2	168.95.192.1

IPv6 Address	
Auto Configuration	<input checked="" type="checkbox"/> Enable
DHCPv6 Client	<input type="checkbox"/> Enable
IPv6 Address

4.3.5. Jumbo Frame

This page allow user to configure switch jumbo frame size.

To display Jumbo Frame web page, click **Port > Jumbo Frame**

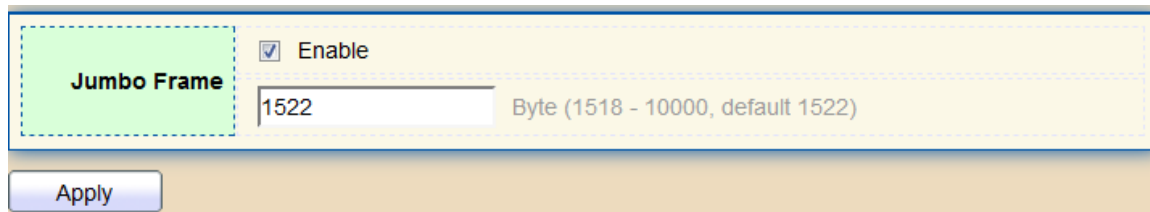

Figure 33 - Port > Jumbo Frame

Item	Description
Jumbo Frame	Enable or disable jumbo frame. When jumbo frame is enabled, switch max frame size is allowed to configure. When jumbo frame is disabled, default frame size 1522 will be used.

4.4. VLAN

A virtual local area network, virtual LAN or VLAN, is a group of hosts with a common set of requirements that communicate as if they were attached to the same broadcast domain, regardless of their physical location. A VLAN has the same attributes as a physical local area network (LAN), but it allows for end stations to be grouped together even if they are not located on the same network switch. VLAN membership can be configured through software instead of physically relocating devices or connections.

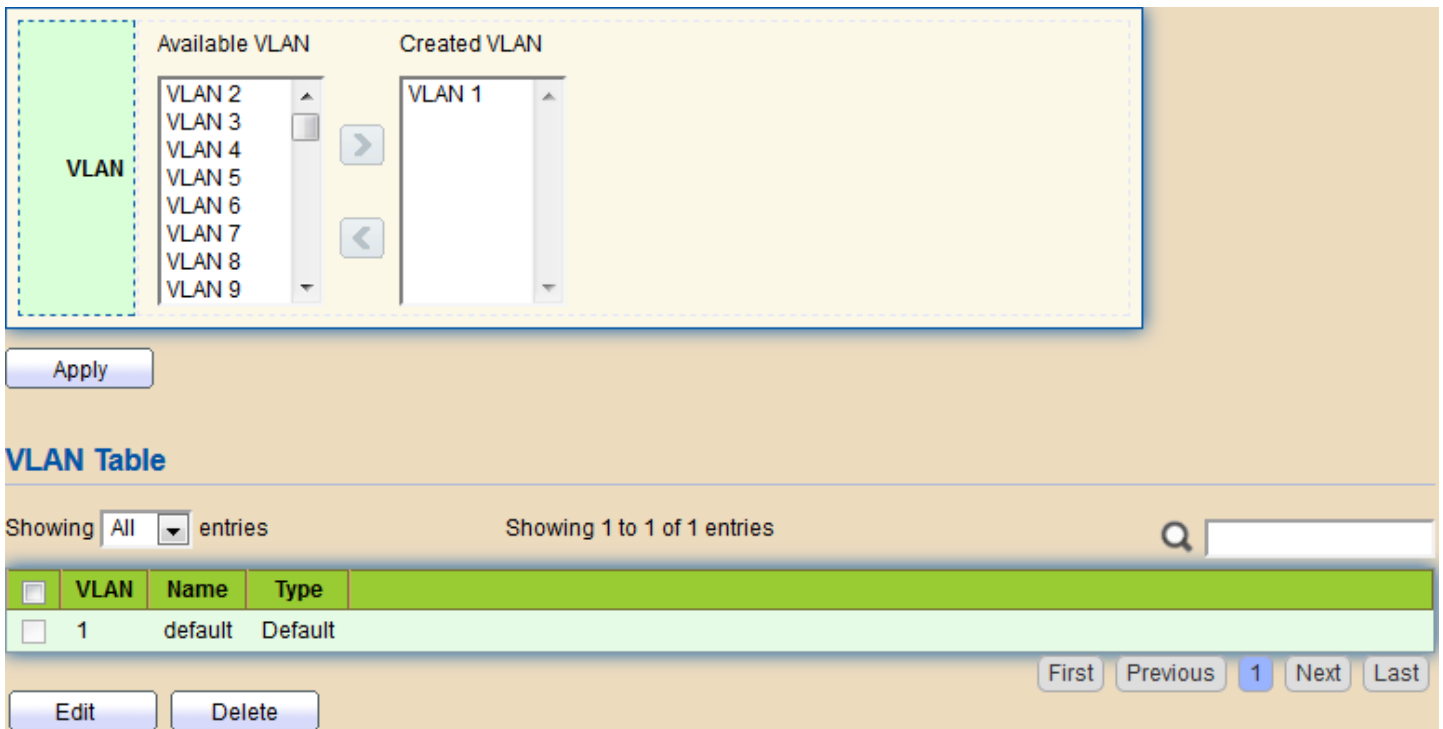

4.4.1. VLAN

Use the VLAN pages to configure settings of VLAN.

4.4.1.1. Create VLAN

This page allows user to add or delete VLAN ID entries and browser all VLAN entries that add statically or dynamic learned by GVRP. Each VLAN entry has a unique name, user can edit VLAN name in edit page.

To display Create VLAN page, click **VLAN > VLAN > Create VLAN**

Edit

Figure 41 - VLAN > Voice VLAN > Property

Item	Description
State	Set checkbox to enable or disable voice VLAN function.
VLAN	Select Voice VLAN ID. Voice VLAN ID cannot be default VLAN.
Cos/802.1p	Select a value of VPT. Qualified packets will use this VPT value as inner priority.
Remarking	Set checkbox to enable or disable 1p remarking. If enabled, qualified packets will be remark by this value.
Aging Time	Input value of aging time. Default is 1440 minutes. A voice VLAN entry will be age out after this time if without any packet pass through.
Port Setting Table	
Port	Display port entry.
State	Display enable/disabled status of interface.
Mode	Display voice VLAN mode.
QoS Policy	Display voice VLAN remark will effect which kind of packet.

Click "Edit" button to view Edit Port Setting menu.

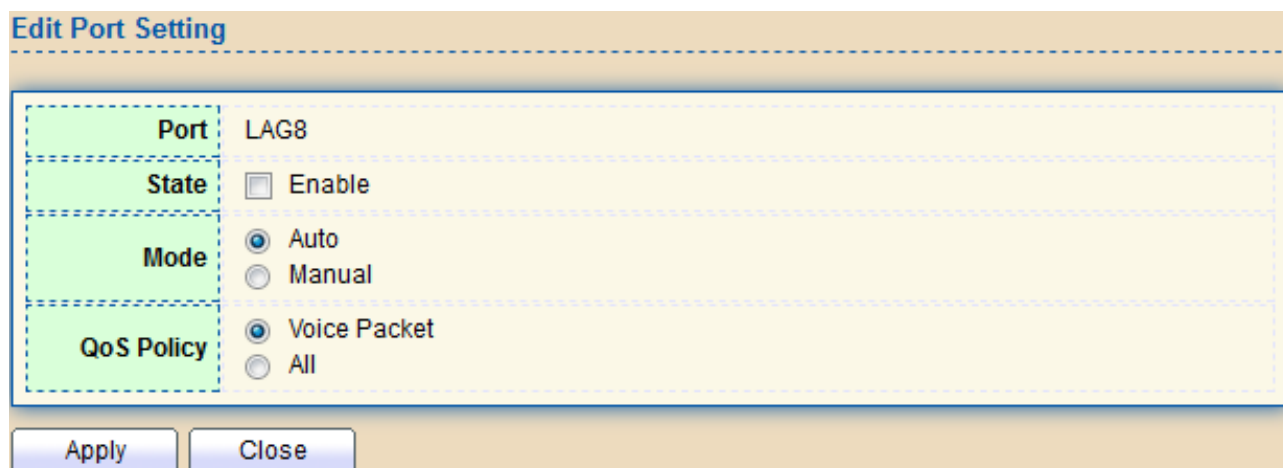

Figure 42 - VLAN > Voice VLAN > Property > Edit Port Setting

Item	Description
Port	Display selected port to be edited.
State	Set checkbox to enable/disabled voice VLAN function of interface.
Mode	Select port voice VLAN mode <ul style="list-style-type: none"> • Auto: Voice VLAN auto detect packets that match OUI table and add received port into voice VLAN ID tagged member. • Manual: User need add interface to VLAN ID tagged member manually.
QoS Policy	Select port QoS Policy mode <ul style="list-style-type: none"> • Voice Packet: QoS attributes are applied to packets with OUIs in the source MAC address. • All: QoS attributes are applied to packets that are classified to the Voice VLAN.

4.4.2.2. Voice OUI

This page allow user to add, edit or delete OUI MAC addresses. Default has 8 pre-defined OUI MAC.

To display the Voice OUI Web page, click **VLAN > Voice VLAN > Voice OUI**.

Voice OUI Table

4.4.5.2. Surveillance OUI

This page allow user to add, edit or delete OUI MAC addresses.

To display Surveillance OUI web page, click **VLAN> Surveillance VLAN> Surveillance OUI**.

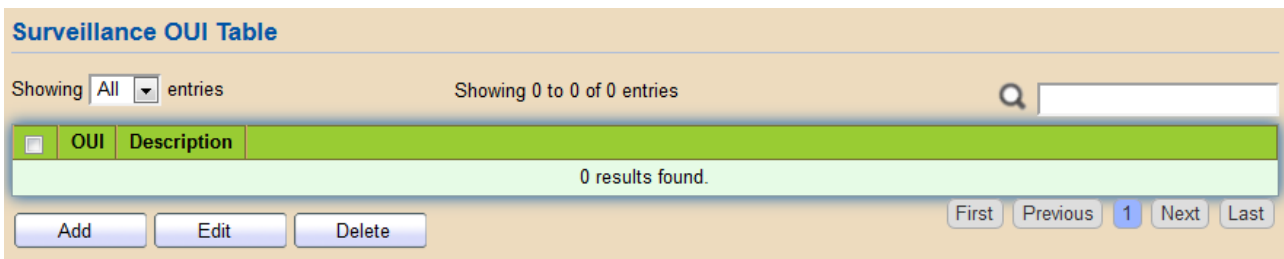

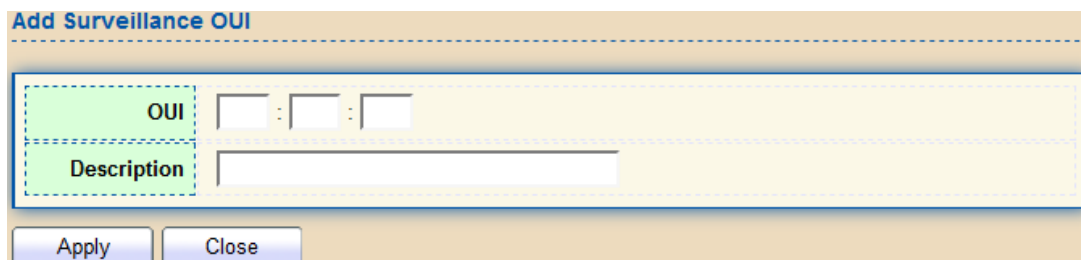

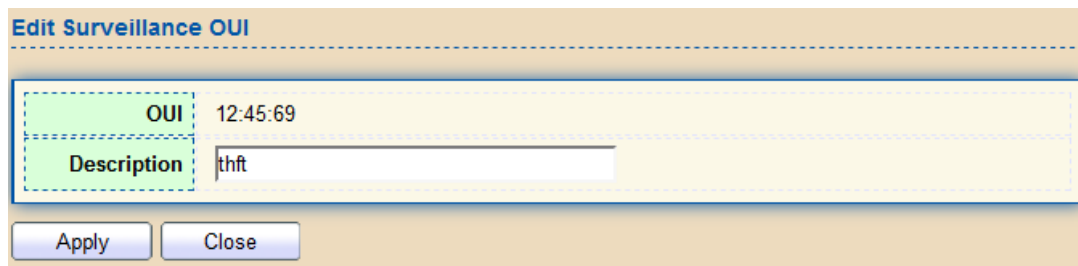

Figure 54 - VLAN > Surveillance VLAN > Surveillance OUI

Item	Description
OUI	Display OUI MAC address.
Descripton	Display description of OUI entry.

Click "Add" or "Edit" button to view the Add/Edit Surveillance OUI menu.

The dialog box titled "Edit Surveillance OUI" contains two input fields: "OUI" with the value "12:45:69" and "Description" with the value "thft". Below the fields are "Apply" and "Close" buttons.

Figure 55 - VLAN > Surveillance VLAN > Surveillance OUI > Add/Edit Surveillance OUI

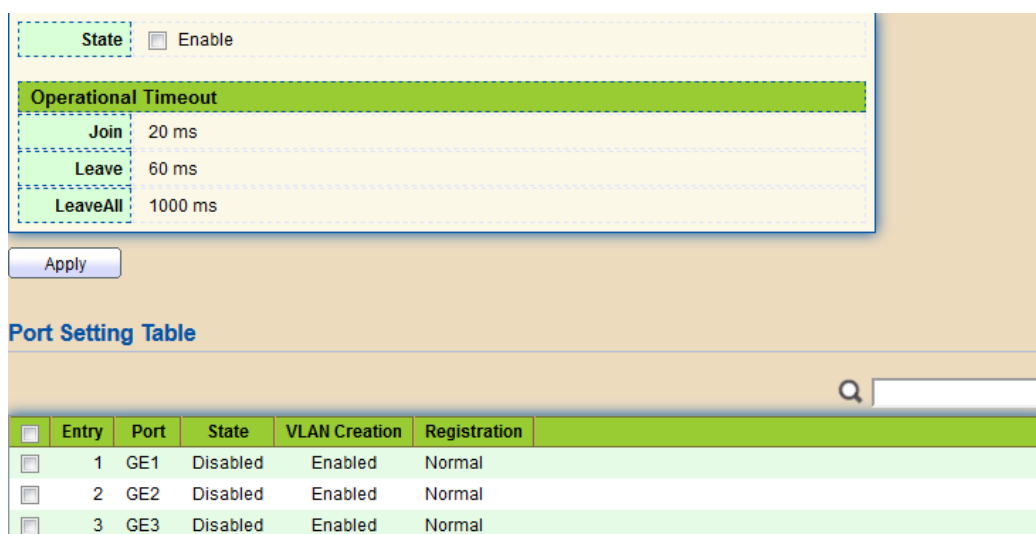

Item	Description
OUI	Input OUI MAC address. Can't be edited in edit dialog.
Description	Input description of the specified MAC address to the Surveillance VLAN OUI table.

4.4.6. GVRP

4.4.6.1. Property

This page allow user to enable or disable GVRP function and GVRP port setting.

To display GVRP Global and Port Setting web page, click **VLAN> GVRP> Property**.

The GVRP Property configuration page includes a "State" section with an "Enable" checkbox. Below it is the "Operational Timeout" section with three rows: "Join" (20 ms), "Leave" (60 ms), and "LeaveAll" (1000 ms). An "Apply" button is located below the timeouts. The "Port Setting Table" section contains a table with columns: Entry, Port, State, VLAN Creation, and Registration. The table lists three entries (1, 2, 3) for ports GE1, GE2, and GE3, all with a "Disabled" state, "Enabled" VLAN Creation, and "Normal" Registration.

Entry	Port	State	VLAN Creation	Registration
1	GE1	Disabled	Enabled	Normal
2	GE2	Disabled	Enabled	Normal
3	GE3	Disabled	Enabled	Normal

---------------	--------------------------------------

4.5. MAC Address Table

Use the MAC Address Table pages to show dynamic MAC table and configure settings for static MAC entries.

4.5.1. Dynamic Address

To display the Dynamic Address web page, click **MAC Address Table > Dynamic Address**.

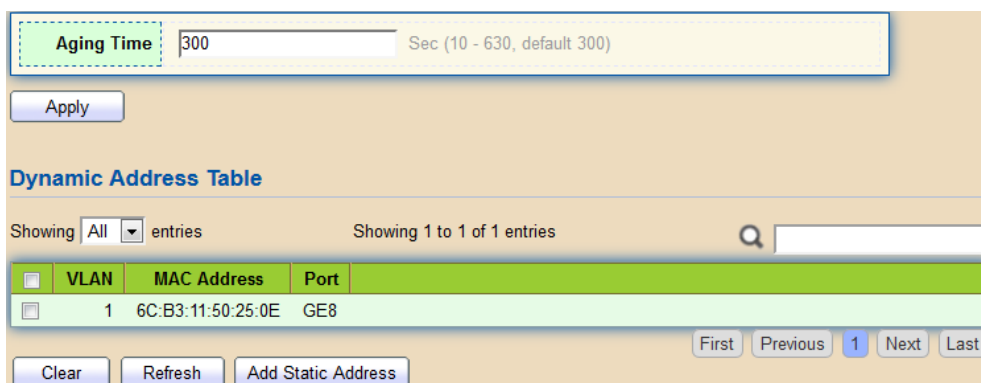

Figure 60 - MAC Address Table > Dynamic Address

Item	Description
Aging Time	The time in seconds that an entry remains in the MAC address table. Its valid range is from 10 to 630 seconds, and the default value is 300 seconds.

4.5.2. Static Address

To display the Static Address web page, click **MAC Address Table > Static Address**.

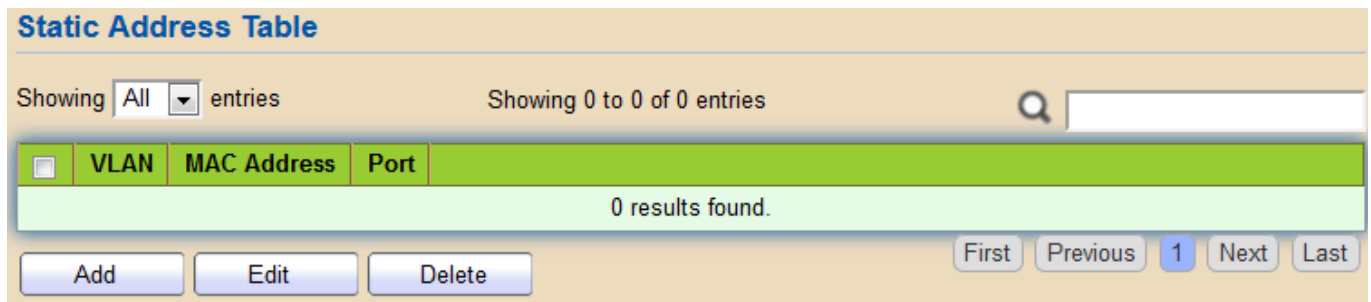

Figure 61 - MAC Address Table > Static Address.

Item	Description
MAC Address	The MAC address to which packets will be statically forwarded.
VLAN	Specify the VLAN to show or clear MAC entries.
Port	Interface or port number.

4.5.3. Filtering Address

To display the Filtering Address web page, click **MAC Address Table > Filtering Address**.

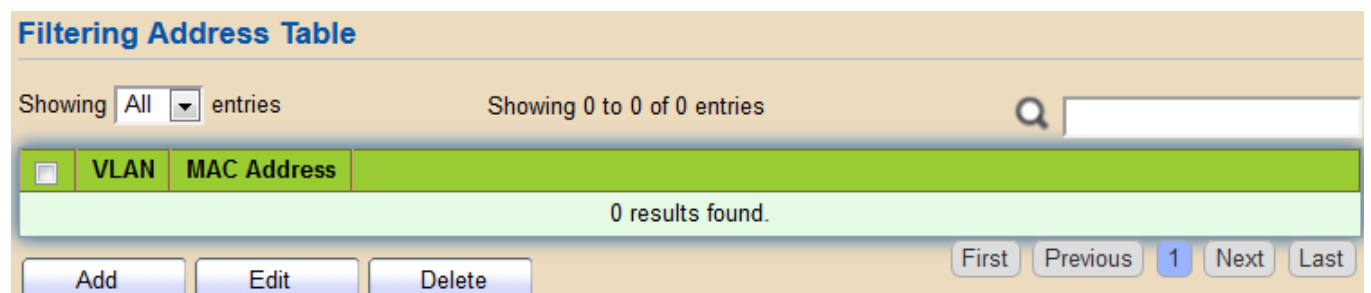

Figure 62 - MAC Address Table > Filtering Address.

Item	Description
MAC Address	Specify unicast MAC address in the packets to be dropped.
VLAN	Specify the VLAN to show or clear MAC entries.

4.6. Spanning Tree

The Spanning Tree Protocol (STP) is a network protocol that ensures a loop-free topology for any bridged Ethernet local area network.

4.6.1. Property

To display the Property web page, click **Spanning Tree > Property**.

State	<input type="checkbox"/> Enable	
Operation Mode	<input type="radio"/> STP <input checked="" type="radio"/> RSTP <input type="radio"/> MSTP	
Path Cost	<input checked="" type="radio"/> Long <input type="radio"/> Short	
BPDU Handling	<input type="radio"/> Filtering <input checked="" type="radio"/> Flooding	
Priority	32768	(0 - 61440, default 32768)
Hello Time	2	Sec (1 - 10, default 2)
Max Age	20	Sec (6 - 40, default 20)
Forward Delay	15	Sec (4 - 30, default 15)
Tx Hold Count	6	(1 - 10, default 6)
Region Name	00:E0:4C:00:00:00	
Revision	0	(0 - 65535, default 0)
Max Hop	20	(1 - 40, default 20)
Operational Status		
Bridge Identifier	32768-00:E0:4C:00:00:00	
Designated Root Bridge	0-00:00:00:00:00:00	
Root Port	N/A	
Root Path Cost	0	
Topology Change Count	0	
Last Topology Change	0D/0H/0M/0S	
<input type="button" value="Apply"/>		

Figure 63 - Spanning Tree > Property

Item	Description
State	Enable/disable the STP on the switch.

Operation Mode	<p>Specify the STP operation mode.</p> <ul style="list-style-type: none"> • STP: Enable the Spanning Tree (STP) operation. • RSTP: Enable the Rapid Spanning Tree (RSTP) operation. • MSTP: Enable the Multiple Spanning Tree (MSTP)
Path Cost	<p>Specify the path cost method.</p> <ul style="list-style-type: none"> • Long: Specifies that the default port path costs are within the range: 1-200,000,000. • Short: Specifies that the default port path costs are within the range: 1-65,535.
BPDU Handling	<p>Specify the BPDU forward method when the STP is disabled.</p> <ul style="list-style-type: none"> • Filtering: Filter the BPDU when STP is disabled. • Flooding: Flood the BPDU when STP is disabled.
Priority	<p>Specify the bridge priority. The valid range is from 0 to 61440, and the value should be the multiple of 4096. It ensures the probability that the switch is selected as the root bridge, and the lower value has the higher priority for the switch to be selected as the root bridge of the topology.</p>
Hello Time	<p>Specify the STP hello time in second to broadcast its hello message to other bridges by Designated Ports. Its valid range is from 1 to 10 seconds.</p>
Max Age	<p>Specify the time interval in seconds for a switch to wait the configuration messages, without attempting to <u>redefine its own configuration</u>.</p>
Forward Delay	<p>Specify the STP forward delay time, which is the amount of time that a port remains in the Listening and Learning states before it enters the Forwarding state. Its valid range is from 4 to 10 seconds.</p>
TX Hold Count	<p>Specify the tx-hold-count used to limit the maximum numbers of packets transmission per second. The valid range is from 1 to 10.</p>
Region Name	<p>The MSTP instance name. Its maximum length is 32 characters. The default value is the MAC address of the switch.</p>

Revision	The MSTP revision number. Its valid range is from 0 to 65535.
Max Hop	Specify the number of hops in an MSTP region before the BPDU is discarded. The valid range is 1 to 40.
Operational Status	
Bridge Identifier	Bridge identifier of the switch.
Designated Root Identifier	Bridge identifier of the designated root bridge.
Root Port	Operational root port of the switch.
Root Path Cost	Operational root path cost.
Topology Change Conunt	Numbers of the topology changes.
Last Topology Change	The last time for the topology change.

4.6.2. Port Setting

To configure and display the STP port settings, click **STP > Port Setting**.

Port Setting Table

<input type="checkbox"/>	Entry	Port	State	Path Cost	Priority	BPDU Filter	BPDU Guard	Operational Edge	Operational Point-to-Point	Port Role	Port State	Designated Bridge	Designated Port ID	Designated Cost

Figure 67 - Spanning Tree > MST Instance > Edit MST Instance Setting

Item	Description
VLAN	Select the VLAN list for the specified MSTI.
Priority	Specify the bridge priority on the specified MSTI. The valid range is from 0 to 61440, and the value must be the multiple of 4096. It ensures the probability that the switch is selected as the root bridge, and the lower values has the higher priority for the switch to be selected as the root bridge of the STP topology.

4.6.4. MST Port Setting

To configure and display MST port setting, click **STP > MST Port Setting**.

4.7. Discovery

Use this section to configure LLDP.

4.7.1. LLDP

LLDP is a one-way protocol; there are no request/response sequences. Information is advertised by stations implementing the transmit function, and is received and processed by stations implementing the receive function. The LLDP category contains LLDP and LLDP-MED pages.

4.7.1.1. Property

To display LLDP Property Setting web page, click **Discovery > LLDP > Property**.

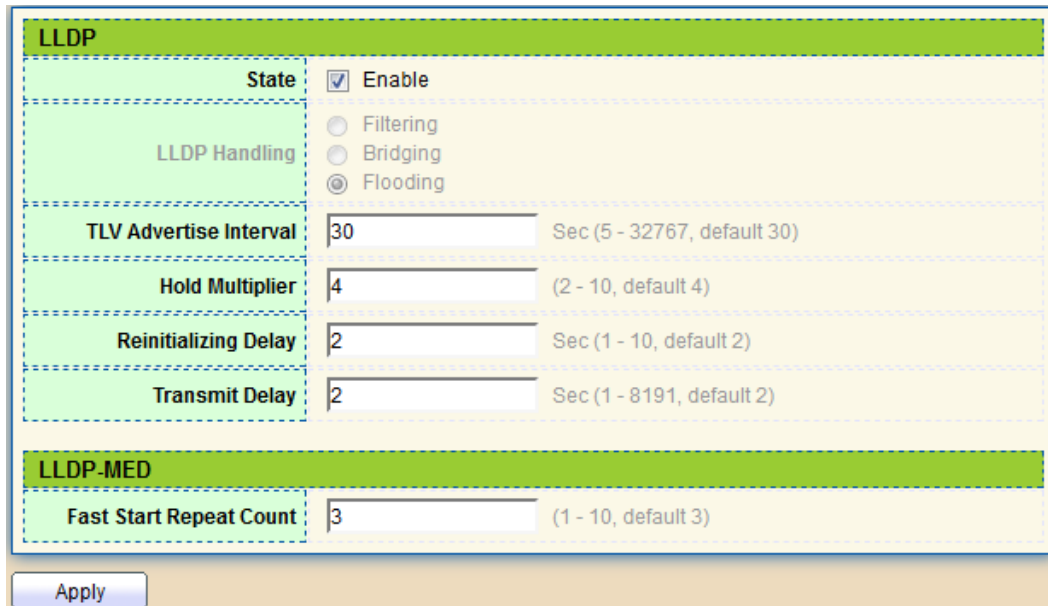

Figure 72 - Discovery > LLDP > Property

Item	Description
State	Enable/ Disable LLDP protocol on this switch.
LLDP Handling	<p>Select LLDP PDU handling action to be filtered, bridging or flooded when LLDP is globally disabled.</p> <ul style="list-style-type: none"> Filtering: Deletes the packet. Bridging: (VLAN-aware flooding) Forwards the packet to all VLAN members. Flooding: Forwards the packet to all ports
TLV Advertise Interval	Select the interval at which frames are transmitted. The default is 30 seconds, and the valid range is 5-32767 seconds.
Holdtime Multiplier	Select the multiplier on the transmit interval to assign to TTL (range 2-10, default = 4).
Reinitialization Delay	Select the delay before a re-initialization (range 1-10 seconds, default = 2).

Transmit Delay	Select the delay after an LLDP frame is sent (range 1-8191 seconds, default = 3).
Fast Start Repeat Count	Select fast start repeat count when port link up (range 1-10, default = 3).

4.7.1.2. Port Setting

To display LLDP Port Setting, click **Discovery > LLDP > Port Setting**.

Port Setting Table

Figure 84 LLDP Neighbor Detail Page

4.7.1.8. Statistics

The Link Layer Discovery Protocol (LLDP) Statistics page displays summary and per-port information for LLDP frames transmitted and received on the switch.

To display LLDP Statistics status, click **Discovery > LLDP > Statistics**.

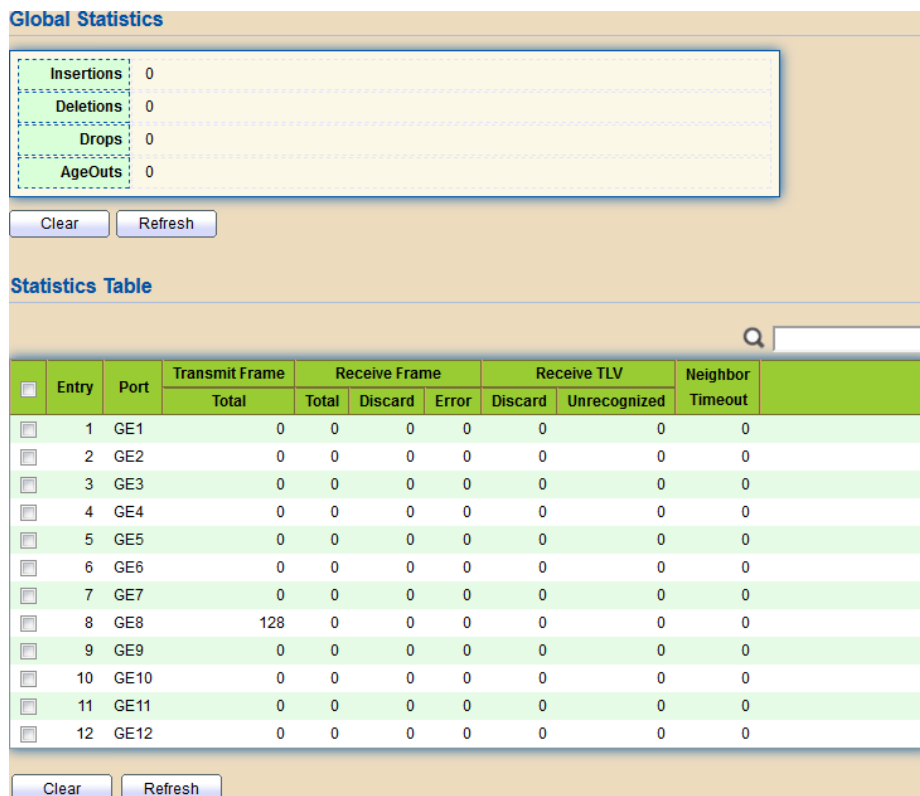

Figure 85 - Discovery > LLDP > Statistics

Item	Description
Insertions	The number of times the complete set of information advertised by a particular MAC Service Access Point (MSAP) has been inserted into tables associated with the remote systems.
Deletions	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems.
Drops	The number of times the complete set of information advertised by MSAP could not be entered into tables associated with the remote systems because of insufficient resources.
Age Outs	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems because the information timeliness interval has expired.
Statistics Table	
Port	Interface or port number.

Transmit Frame Total	Number of LLDP frames transmitted on the corresponding port.
Receive Frame Total	Number of LLDP frames received by this LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive Frame Discard	Number of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
Receive Frame Error	Number of invalid LLDP frames received by the LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive TLV Discard	Number of TLVs of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
Receive TLV Unrecognized	Number of TLVs of LLDP frames that are unrecognized while the LLDP agent is enabled.
Neighbor Timeout	Number of age out LLDP frames.

4.8. Multicast

Use this section to configure Multicast.

4.8.1. General

Use the General pages to configure settings of IGMP and MLD common function.

4.8.1.1. Property

To display multicast general property Setting web page, click **Multicast> General> Property**

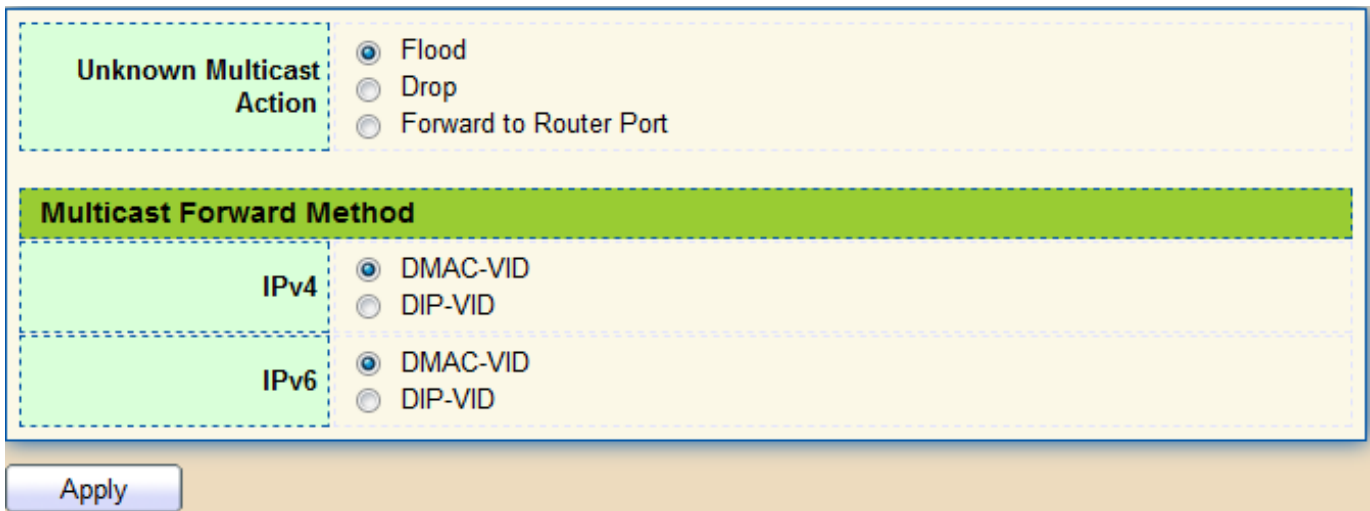

Figure 86 - Multicast > General > Property

Item	Description
Unknown Multicast Action	Set the unknown multicast action <ul style="list-style-type: none"> Flood: flood the unknown multicast data. Drop: drop the unknown multicast data. Router port: forward the unknown multicast data to router port.
IPv4	Set the ipv4 multicast forward method. <ul style="list-style-type: none"> MAC-VID: forward method dmac+vid. DIP-VID: forward method dip+vid.
IPv6	Set the ipv6 multicast forward method. <input type="checkbox"/> <ul style="list-style-type: none"> MAC-VID: forward method dmac+vid. <input type="checkbox"/> DIP-VID: forward method dip+vid(dip is ipv6 low 32 bit).

4.8.1.2. Group Address

This page allow user to browse all multicast groups that dynamic learned or statically added.

To display Multicast General Group web page, click **Multicast > General > Group Address**

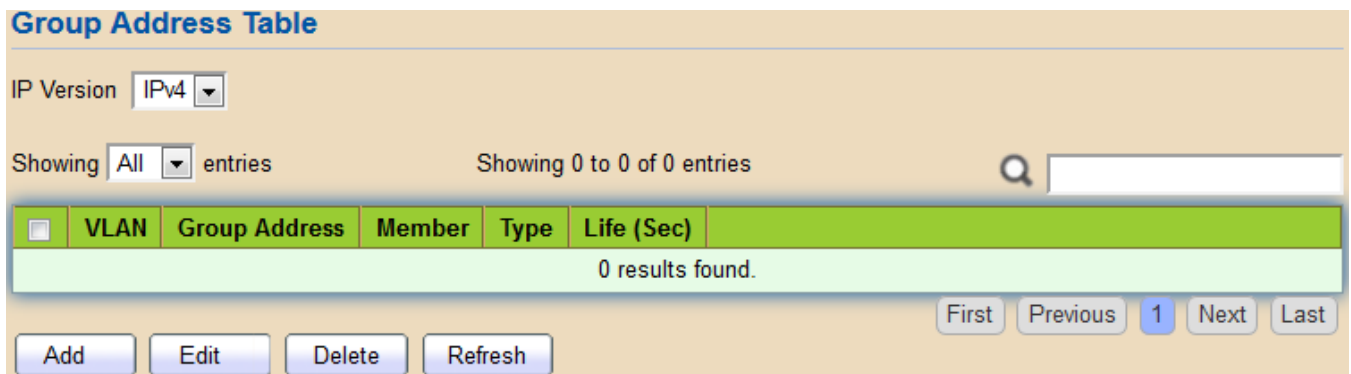

Figure 87 - Multicast > General > Group Address

Item	Description
Address Type	In add dialog, user need to specify server Address Type <ul style="list-style-type: none">• Hostname: Use domain name as server address• IPv4: Use IPv4 as server address <input type="checkbox"/>• IPv6: Use IPv6 as server address
Server Address	In add dialog, user need to input server address based on address type. In edit dialog, it shows current edit server address.
Server Port	Set TACACS+ server port
Priority	Set TACACS+ server priority (smaller value has higher priority). TACACS+ session will try to establish with the server setting which has highest priority. If failed, it will try to connect to the server with next higher priority
Timeout	Set TACACS+ server timeout value. If it is fail to connect to server, it will keep trying until timeout.

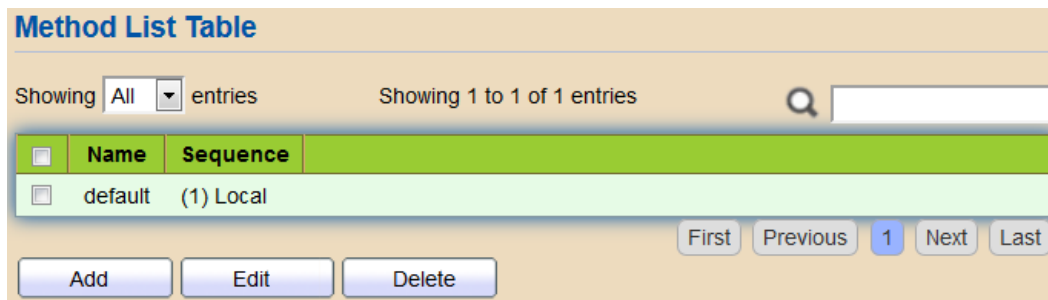

4.9.3. AAA

4.9.3.1. Method List

This page allow user to add, edit or delete login authentication list settings (The “default” list cannot be deleted.). The line combined to this list will authenticate login user by methods in this list. If the first method is failed, it will try to use the next priority method to authenticate if it exists.

With RADIUS and TACACS+ methods, the failed means connecting to server fail. With Local method, the failed means cannot find the user in local database.

To display Method List web page, click **Security > AAA > Method List**

MAC Address	Host MAC address.
Current Type	<p>Show current authenticating type</p> <ul style="list-style-type: none"> 802.1x: Use IEEE 802.1X to do authenticating MAC-Based: Use MAC-Based authentication to do authenticating. WEB-Based: Use WEB-Based authentication to do authenticating.

Status	<p>Show host authentication session status</p> <ul style="list-style-type: none"> • IP version (IPv4, IPv6) • Disable: This session is ready to be deleted • Running: Authentication process is running • Authorized: Authentication is passed and getting network accessibility. • Unauthorized: Authentication is not passed and not getting network accessibility.
	<ul style="list-style-type: none"> • authenticating until quiet period. • Guest: Host is in the guest VLAN.
Operational(VLAN)	Shows host operational VLAN ID.
Operational (Session Time)	In “Authorized” state, it shows total time after authorized.
Operational (Inactived)	In “Authorized” state, it shows how long the host do not send any packet.
Operational (Quiet Time)	In “Locked” state, it shows total time after locked.
Authorized (VLAN)	Shows VLAN ID given from authorized procedure.
Authorized (Reauthentication)	Shows reauthentication period given from authorized procedure.
Authorized (Inactive)	Shows inactive timeout given from authorized procedure.

4.9.6. Port Security

This page allow user to configure port security settings for each interface. When port security is enabled on interface, action will be perform once learned MAC address over limitation.

To display Port Security web page, click **Security > Port Security**

Entry	Port	State	MAC Address	Action
1	GE1	Disabled	1	Discard
2	GE2	Disabled	1	Discard
3	GE3	Disabled	1	Discard
18	LAG6	Disabled	1	Discard
19	LAG7	Disabled	1	Discard
20	LAG8	Disabled	1	Discard

Figure 133 - Security > Port Security

Item	Description
State	Enable/Disable the port security function.
Port	Select one or multiple ports to configure.
State	Select the status of port security <ul style="list-style-type: none"> Disable: Disable port security function. Enable: Enable port security function.
MAC Address	Specify the number of how many mac addresses can be learned.

Action	<p>Select the action if learned mac addresses</p> <ul style="list-style-type: none"> • Forward: Forward this packet whose SMAC is new to system and exceed the learning-limit number. • Discard: Discard this packet whose SMAC is new to system and exceed the learning-limit number. • Shutdown: Shutdown this port when receives a packet whose SMAC is new to system and exceed the learning limit number.

Click "Edit" button to view Edit Port Setting menu.

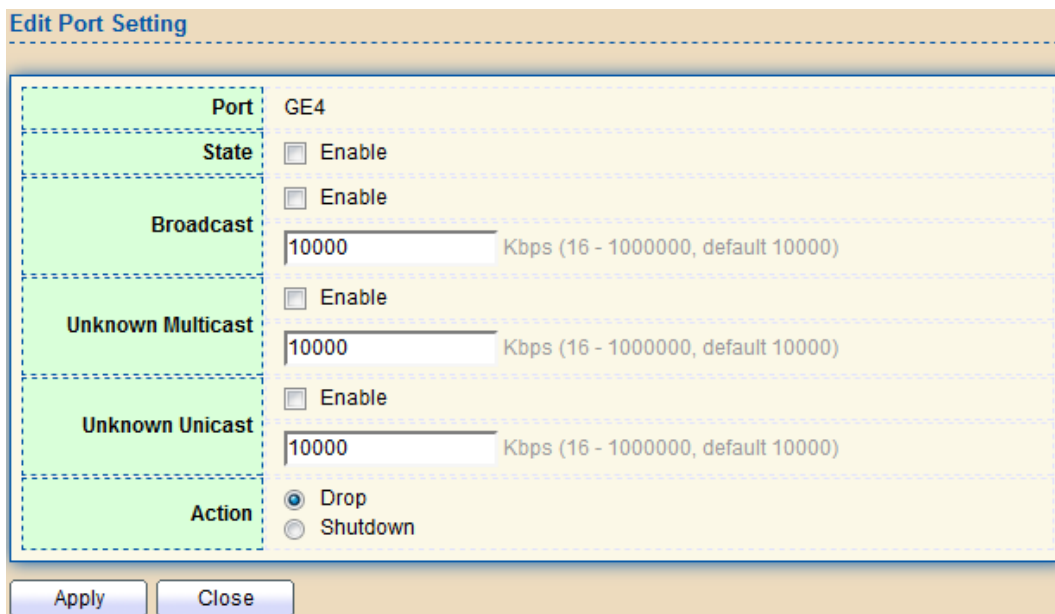

Figure 138 - Security > Storm Control > Edit Port Setting

Item	Description
Port	Select the setting ports.
State	Select the state of setting <ul style="list-style-type: none"> • Enable: Enable the storm control function.
Broadcast	Enable: Enable the storm control function of Broadcast packet. Value of storm control rate, Unit: pps (packet per-second, range 1- 262143) or Kbps (Kbits per-second, range 16 - 1000000) depends on global mode setting.
Unknown Multicast	Enable: Enable the storm control function of Unknown multicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1- 262143) or Kbps (Kbits per-second, range 16 - 1000000) depends on global mode setting.
Unknown Unicast	Enable: Enable the storm control function of Unknown unicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1 - 262143) or Kbps (Kbits per-second, range 16 - 1000000) depends on global mode setting.
Action	Select the state of setting <ul style="list-style-type: none"> • Drop: Packets exceed storm control rate will be dropped. • Shutdown: Port will be shutdown when packets exceed storm control rate.

4.9.9. DoS

A Denial of Service (DoS) attack is a hacker attempt to make a device unavailable to its users. DoS attacks saturate the device with external communication requests, so that it cannot respond to legitimate traffic. These attacks usually lead to a device CPU overload.

The DoS protection feature is a set of predefined rules that protect the network from malicious attacks. The DoS Security Suite Settings enables activating the security suite.

4.9.9.1. Property

To display Dos Global Setting web page, click **Security > Dos > Property**

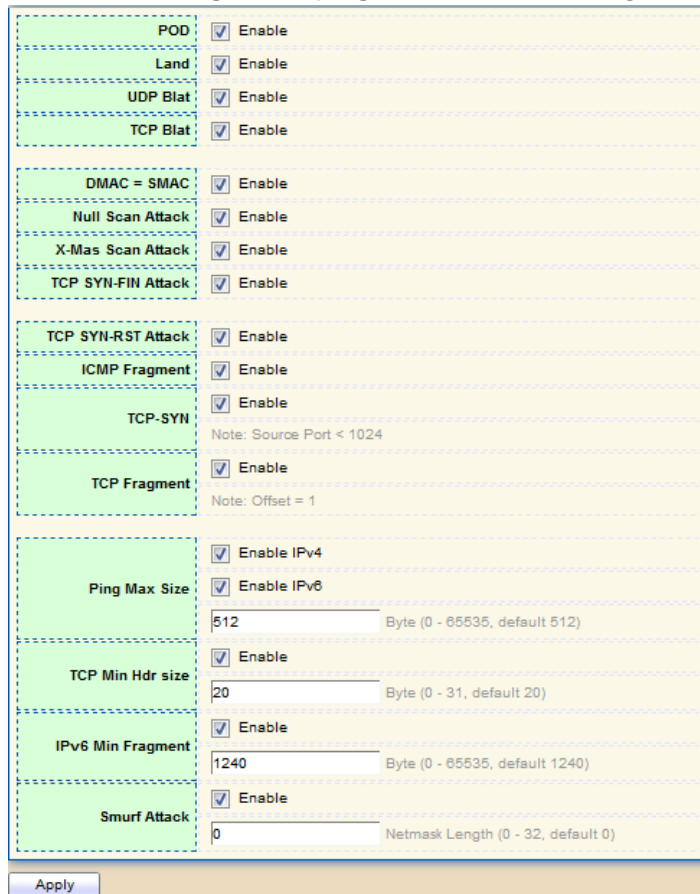

Figure 139 - Security > DoS > Property

Item	Description
POD	Avoids ping of death attack.
Land	Drops the packets if the source IP address is equal to the destination IP address.
UDP Blat	Drops the packets if the UDP source port equals to the UDP destination port.
TCP Blat	Drops the packages if the TCP source port is equal to the TCP destination port.
DMAC = SMAC	Drops the packets if the destination MAC address is equal to the source MAC address.
Null Scan Attach	Drops the packets with NULL scan.
X-Mas Scan Attack	Drops the packets if the sequence number is zero, and the FIN, URG and PSH bits are set.

TCP SYN-FIN Attack	Drops the packets with SYN and FIN bits set.
TCP SYN-RST Attack	Drops the packets with SYN and RST bits set
ICMP Fragment	Drops the fragmented ICMP packets.
TCP SYN (SPORT < 1024)	Drops SYN packets with sport less than 1024.
TCP Fragment (Offset = 1)	Drops the TCP fragment packets with offset equals to one.
Ping Max Size	Specify the maximum size of the ICMPv4/ICMPv6 ping packets. The valid range is from 0 to 65535 bytes, and the default value is 512 bytes.
IPv6 Min Fragment	Checks the minimum size of IPv6 fragments, and drops the packets smaller than the minimum size. The valid range is from 0 to 65535 bytes, and default value is 1240 bytes.
Smurf Attack	Avoids smurf attack. The length range of the netmask is from 0 to 323 bytes, and default length is 0 bytes.

4.9.9.2. Port Setting

To configure and display the state of DoS protection for interfaces, click **Security > DoS > Port Setting**.

Port Setting Table

<input type="checkbox"/>	Entry	Port	State
<input type="checkbox"/>	1	GE1	Disabled

<input type="checkbox"/>	11	GE11	Disabled
<input type="checkbox"/>	12	GE12	Disabled

Figure 140 - Security > DoS > Port Setting

Item	Description
Port	Interface or port number.
State	Enable/Disable the DoS protection on the interface.

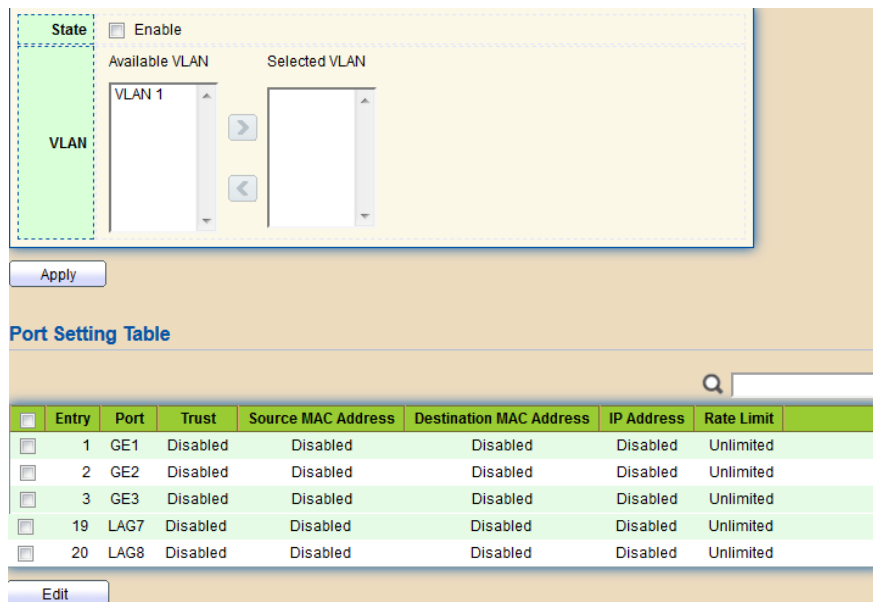

4.9.10. Dynamic ARP Inspection

Use the Dynamic ARP Inspection pages to configure settings of Dynamic ARP Inspection

4.9.10.1 Property

This page allow user to configure global and per interface settings of Dynamic ARP Inspection.

To display property page, click **Security > Dynamic ARP Inspection > Property**

Entry	Port	Trust	Source MAC Address	Destination MAC Address	IP Address	Rate Limit
1	GE1	Disabled	Disabled	Disabled	Disabled	Unlimited
2	GE2	Disabled	Disabled	Disabled	Disabled	Unlimited
3	GE3	Disabled	Disabled	Disabled	Disabled	Unlimited
19	LAG7	Disabled	Disabled	Disabled	Disabled	Unlimited
20	LAG8	Disabled	Disabled	Disabled	Disabled	Unlimited

Figure 141 - Security > Dynamic ARP Inspection > Property

Item	Description
State	Set checkbox to enable/disable Dynamic ARP Inspection function.
VLAN	Select VLANs in left box then move to right to enable Dynamic ARP Inspection. Or select VLANs in right box then move to left to disable Dynamic ARP Inspection.
Port	Display port ID.
Trust	Display enable/disabled trust attribute of interface.
Source MAC Address	Display enable/disabled destination mac address validation attribute of interface.
IP Address	Display enable/disabled IP address validation attribute of interface. Allow zero which means allow 0.0.0.0 IP address.
Rate Limit	Display rate limitation value of interface.

Click "Edit" button to view Edit Port Setting menu.

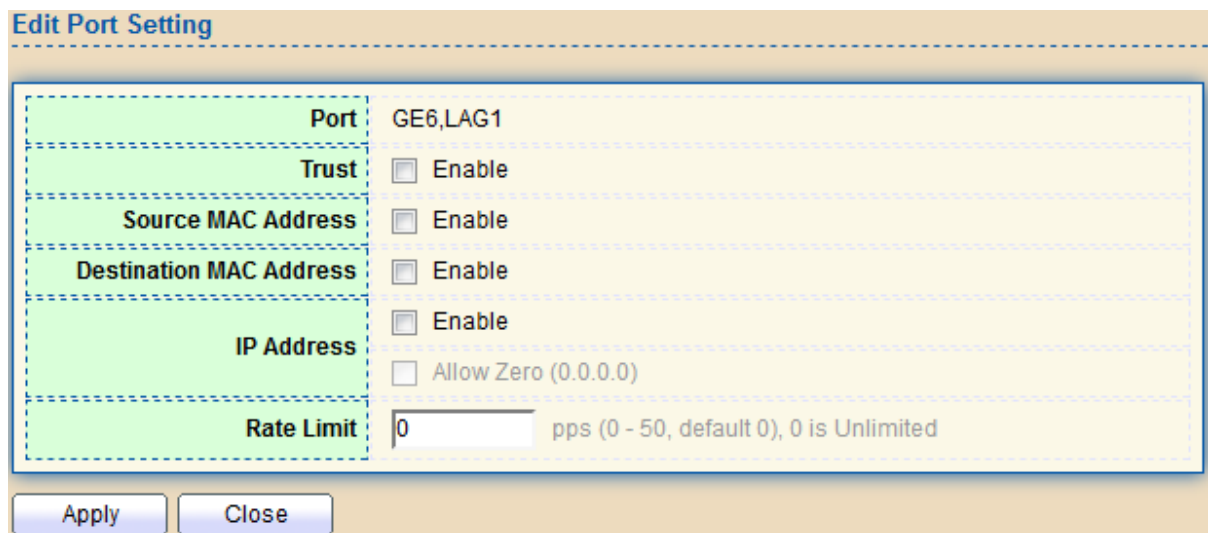

Figure 142 - Security > Dynamic ARP Inspection > Property>Edit Port Setting

Item	Description
Port	Display selected port to be edited.
Trust	Set checkbox to enable/disable trust of interface. All ARP packet will be forward directly if enable trust. Default is disabled.
Source MAC Address	Set checkbox to enable or disable source mac address validation of interface. All ARP packets will be checked whether sender mac is same as source mac in Ethernet header if enable source mac address validation. Default is disabled.
Destination MAC Address	Set checkbox to enable or disable destination mac address validation of interface. All ARP packets will be checked whether target mac is same as destination mac in Ethernet header if enable destination mac address validation. Default is disabled.
IP Address	Set checkbox to enable or disable IP address validation of interface. All ARP packets will be checked whether IP address is 0.0.0.0, 255.255.255.255 or multicast address. Default is disabled.
IP Address - Allow Zero	Set checkbox to enable or disable allow zero of IP address validation. 0.0.0.0 IP address is valid if allow zero enable. Default is disabled.

Rate Limit	Input rate limitation of ARP packets. The unit is pps. 0 means unlimited. Default is unlimited.
------------	---

4.9.10.2 Statistics

This page allow user to browse all statistics that recorded by Dynamic ARP Inspection function.

To display Statistics page, click **Security > Dynamic ARP Inspection > Statistics**

Statistics Table									
<input type="checkbox"/>	Entry	Port	Forward	Source MAC Failure	Destination MAC Failure	Source IP Validation Failure	Destination IP Validation Failure	IP-MAC Mismatch Failure

Figure 154 - Security > IP Source Guard > Add/Edit IP-MAC-Port-VLAN Binding

Item	Description
Port	Select port from list of a binding entry.
VLAN	Specify a VLAN ID of a binding entry.
Binding	Select matching mode of binding entry <ul style="list-style-type: none"> IP-MAC-Port-VLAN: packet must match IP address、MAC address、Port and VLAN ID. IP-Port-VLAN: packet must match IP address or subnet、Port and VLAN ID.
MAC Address	Input MAC address. Only available on IP-MAC-Port-VLAN mode.
IP Address	Input IP address and mask. Mask only available on IP-MAC-Port mode.

4.9.12.3. Save Database

This page allow user to configure DHCP snooping database which can backup and restore dynamic DHCP snooping entries.

To display Save Database page, click **Security > DHCP Snooping > Save Database**.

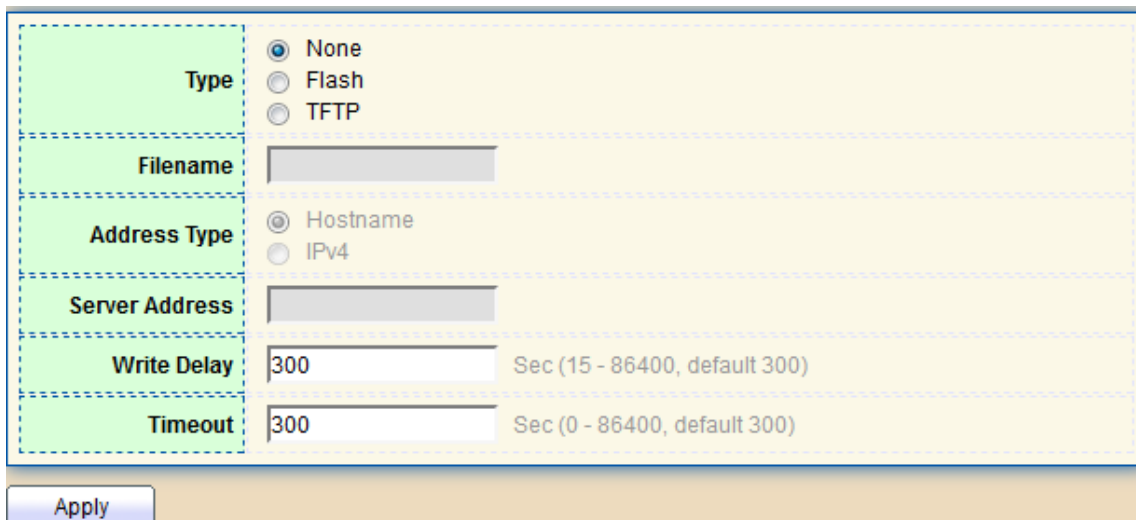

Figure 155 - Security > IP Source Guard > Save Database

Item	Description
Type	<p>Select the type of database agent.</p> <ul style="list-style-type: none"> None: Disable database agent service. Flash: Save DHCP dynamic binding entries to flash. TFTP: Save DHCP dynamic binding entries to remote TFTP server.
Filename	<p>Input filename for backup file. Only available when selecting type “flash” and “TFTP” .</p>
Address Type	<p>Select the type of TFTP server.</p> <ul style="list-style-type: none"> Hostname: TFTP server address is hostname. IPv4: TFTP server address is IPv4 address
Server Address	<p>Input remote TFTP server hostname or IP address. Only available when selecting type “TFTP”</p>

Write Delay	Input delay timer for doing backup after change happened. Default is 300 seconds.
Timeout	Input aborts timeout for doing backup failure. Default is 300 seconds.

4.10. ACL

Use the ACL pages to configure settings for the switch ACL features.

4.10.1. MAC ACL

This page allow user to add or delete ACL rule. A rule cannot be deleted if under binding.

To display MAC ACL page, click **ACL > MAC ACL**

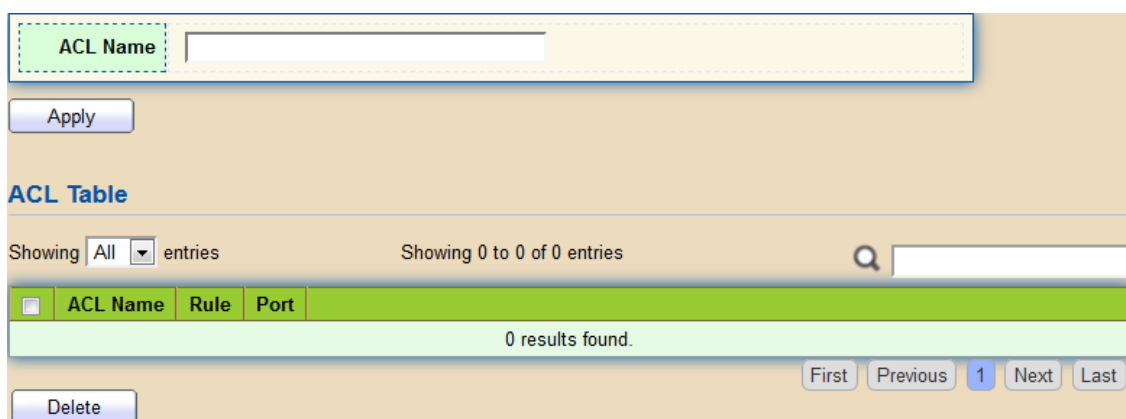

Figure 156 - ACL > MAC ACL

Item	Description
ACL Name	Input MAC ACL name.
ACL Name	Display MAC ACL name.
Rule	Display the number ACE rule of ACL.
Port	Display the port list that bind this ACL.

4.10.2. MAC ACE

This page allow user to add, edit or delete ACE rule. An ACE rule cannot be edited or deleted if ACL under binding. New ACE cannot be added if ACL under binding.

To display MAC ACE page, click **ACL > MAC ACE**

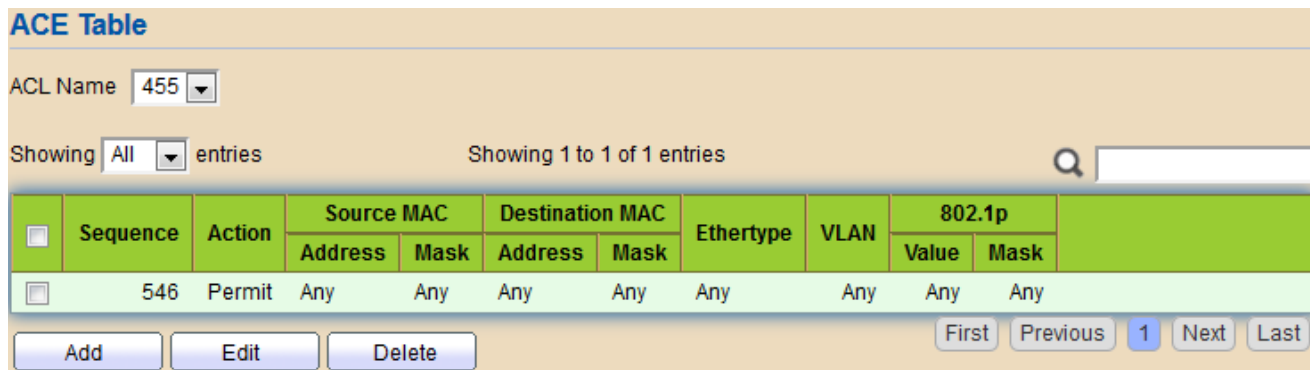

Figure 157 - ACL > MAC ACE

Item	Description
ACL Name	Select the ACL name to which an ACE is being added.
Sequence	Display the sequence of ACE.
Action	Display the action of ACE.
Source MAC	Display the source MAC address and mask of ACE.
Destination MAC	Display the destination MAC address and mask of ACE.
Ethertype	Display the Ethernet frame type of ACE.
VLAN ID	Display the VLAN ID of ACE.
802.1p Value	Display the 802.1p value of ACE.
802.1p Mask	Display the 802.1p mask of ACE.

Click "Edit" button to view the Edit ACE menu.

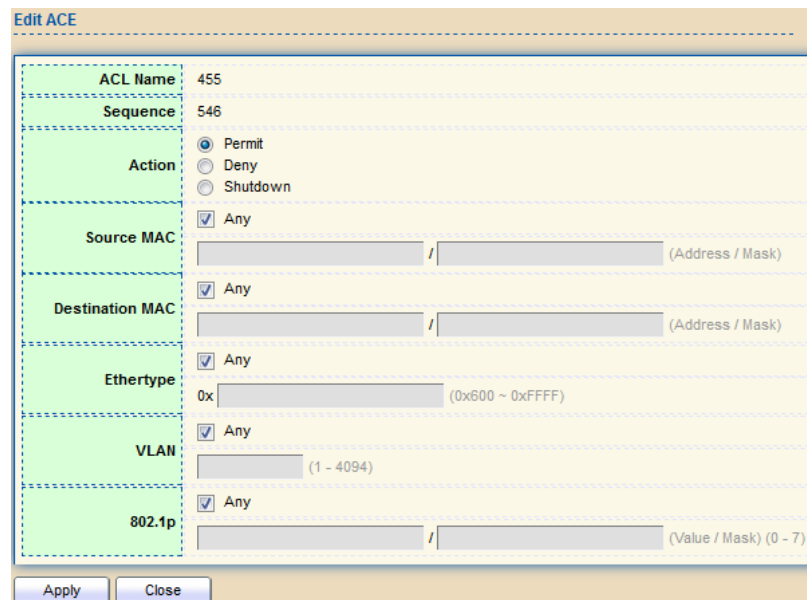

Figure 158 - ACL > Edit ACE

Item	Description
ACL Name	Display the ACL name to which an ACE is being added..
Sequence	Specify the sequence of the ACE. ACEs with higher sequence are processed first (1 is the highest priority). Only available on Add Dialog.
Action	<p>Select the action after ACE match packet. <input type="checkbox"/></p> <ul style="list-style-type: none"> • Permit: Forward packets that meet the ACE criteria. • Deny: Drop packets that meet the ACE criteria. • Shutdown: Drop packets that meet the ACE criteria, and disable the port from where the packets were received. Such ports can be reactivated from the Port Settings page.

Source MAC	<p>Select the type for source MAC address. <input type="checkbox"/></p> <ol style="list-style-type: none"> Any: All source addresses are acceptable. <input type="checkbox"/> User Defined: Only a source address or a range of source addresses which users define are acceptable. Enter the source MAC address and mask to which will be matched.
Destination MAC	<p>Select the type for Destination MAC address. <input type="checkbox"/></p> <ul style="list-style-type: none"> Any: All destination addresses are acceptable. <input type="checkbox"/> User Defined: Only a destination address or a range of destination addresses which users define are acceptable. Enter the destination MAC address and mask to which will be matched.
Ethertype	<p>Select the type for Ethernet frame type. <input type="checkbox"/></p> <ul style="list-style-type: none"> Any: All Ethernet frame type is acceptable. <input type="checkbox"/> User Defined: Only an Ethernet frame type which users define is acceptable. Enter the Ethernet frame type value to which will be matched.
VLAN	<p>Select the type for VLAN ID. <input type="checkbox"/></p> <ul style="list-style-type: none"> Any: All VLAN ID is acceptable. <input type="checkbox"/> User Defined: Only a VLAN ID which users define is acceptable. Enter the VLAN ID to which will be matched.
802.1p	<p>Select the type for 802.1p value. <input type="checkbox"/></p> <ul style="list-style-type: none"> Any: All 802.1p value is acceptable. <input type="checkbox"/> User Defined: Only an 802.1p value or a range of 802.1p value which users define is acceptable. Enter the 802.1p value and mask to which will be matched.

4.10.3. IPv4 ACL

This page allow user to add or delete IPv4 ACL rule. A rule cannot be deleted if under binding.

To display IPv4 ACL page, click **ACL > IPv4 ACL**

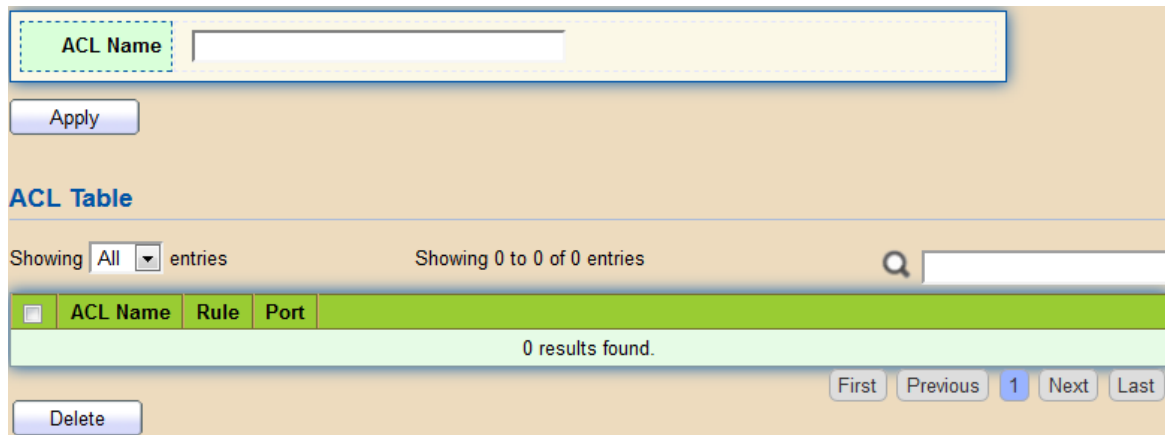

Figure 159 - ACL > IPv4 ACL

Item	Description
ACL Name	Input IPv4 ACL name.
ACL Name	Display IPv4 ACL name.
Rule	Display the number ACE rule of ACL.
Port	Display the port list that bind this ACL.

4.10.4. IPv4 ACE

This page allow user to add, edit or delete ACE rule. An ACE rule cannot be edited or deleted if ACL under binding. New ACE cannot be added if ACL under binding.

To display IPv4 ACE page, click **ACL > IPv4 ACE**

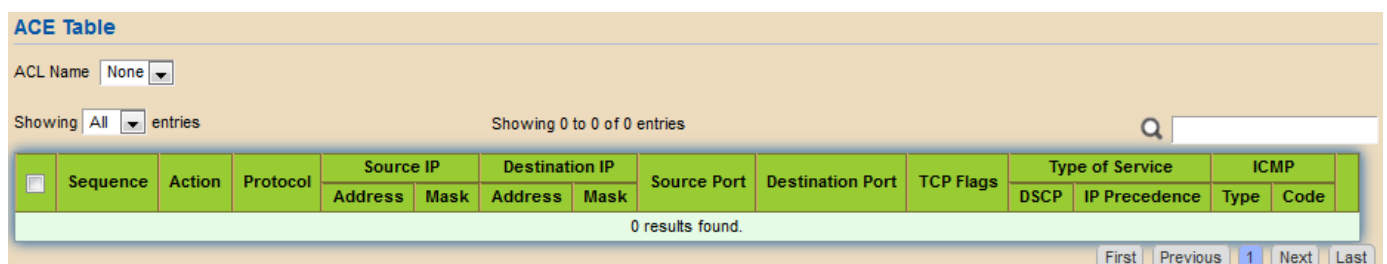

Figure 160 - ACL > IPv4 ACE

Item	Description
ACL Name	Select the ACL name to which an ACE is being added.
Sequence	Display the sequence of ACE.
Action	Display the action of ACE.
Protocol	Display the protocol value of ACE.
Source IP	Display the source IP address and mask of ACE.
Destination IP	Display the destination IP address and mask of ACE.
Source Port	Display single source port or a range of source ports of ACE. Only available when protocol is TCP or UDP.
Destination Port	Display single destination port or a range of destination ports of ACE. Only available when protocol is TCP or UDP.
TCP Flags	Display the TCP flag value if ACE. Only available when protocol is TCP.
Type of Service	Display the ToS value of ACE which could be DSCP or IP Precedence.
ICMP	Display the ICMP type and code of ACE. Only available when protocol is ICMP.

Click "Add" or "Edit" button to view the Add/Edit ACE menu.

4.11.1.2. Queue Scheduling

The switch supports eight queues for each interface. Queue number 8 is the highest priority queue.

Queue number 1 is the lowest priority queue. There are two ways of determining how traffic in queues is handled, Strict Priority (SP) and Weighted Round Robin (WRR).

- Strict Priority (SP)–Egress traffic from the highest priority queue is transmitted first. Traffic from the lower queues is processed only after the highest queue has been transmitted, which provide the highest level of priority of traffic to the highest numbered queue.
- Weighted Round Robin (WRR)–In WRR mode the number of packets sent from the queue is proportional to the weight of the queue (the higher the weight, the

more frames are sent).

The queuing modes can be selected on the Queue page. When the queuing mode is by Strict Priority, the priority sets the order in which queues are serviced, starting with queue_8 (the highest priority queue) and going to the next lower queue when each queue is completed.

When the queuing mode is Weighted Round Robin, queues are serviced until their quota has been used up and then another queue is serviced. It is also possible to assign some of the lower queues to WRR, while keeping some of the higher queues in Strict Priority. In this case traffic for the SP queues is always sent before traffic from the WRR queues. After the SP queues have been emptied, traffic from the WRR queues is forwarded. (The relative portion from each WRR queue depends on its weight).

To display Queue Scheduling web page, click **QoS > General > Queue Scheduling**

Queue Scheduling Table				
Queue	Method			
	Strict Priority	WRR	Weight	WRR Bandwidth (%)

Apply

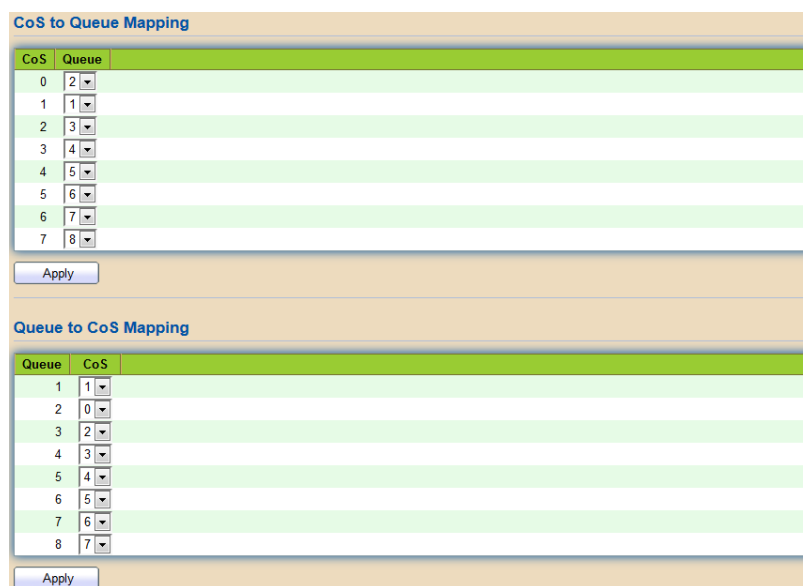

Figure 169 - QoS > General > Queue Scheduling

Item	Description
Queue	Queue ID to configure.
Strict Priority	Set queue to strict priority type.
WRR	Set queue to Weight round robin type.
Weight	If the queue type is WRR, set the queue weight for the queue.
WRR Bandwidth	Percentage of WRR queue bandwidth.

4.11.1.3. CoS Mapping

The CoS to Queue table determines the egress queues of the incoming packets based on the 802.1p priority in their VLAN tags. For incoming untagged packets, the 802.1p priority will be the default CoS/802.1p priority assigned to the ingress ports. Use the Queues to CoS table to remark the CoS/802.1p priority for egress traffic from each queue.

To display CoS Mapping web page, click **QoS > General > CoS Mapping**

The screenshot shows the 'CoS Mapping' web page. It contains two tables. The first table, 'CoS to Queue Mapping', has columns 'CoS' and 'Queue'. The second table, 'Queue to CoS Mapping', has columns 'Queue' and 'CoS'. Both tables have an 'Apply' button below them.

4.11.2. Rate Limit

Use the Rate Limit pages to define values that determine how much traffic the switch can receive and send on specific port or queue.

4.11.2.1. Ingress/Egress Port

This page allow user to configure ingress port rate limit and egress port rate limit. The ingress rate limit is the number of bits per second that can be received from the ingress interface. Excess bandwidth above this limit is discarded.

To display Ingress / Egress Port web page, click **QoS > Rate Limit > Ingress / Egress Port**

Ingress / Egress Port Table							
<input type="checkbox"/>	Entry	Port	Ingress		Egress		
			State	Rate (Kbps)	State	Rate (Kbps)	
<input type="checkbox"/>	1	GE1	Disabled		Disabled		
<input type="checkbox"/>	2	GE2	Disabled		Disabled		
<input type="checkbox"/>	3	GE3	Disabled		Disabled		
<input type="checkbox"/>	10	GE10	Disabled		Disabled		
<input type="checkbox"/>	11	GE11	Disabled		Disabled		
<input type="checkbox"/>	12	GE12	Disabled		Disabled		

Figure 173 - QoS > Rate Limit > Ingress / Egress Port

Item	Description
------	-------------

Port	Port name.
Ingress (State)	Port ingress rate limit state <ul style="list-style-type: none"> • Enabled: Ingress rate limit is enabled • Disabled: Ingress rate limit is disabled
Ingress (Rate)	Port ingress rate limit value if ingress rate state is enabled.
IP Precedence	IP Precedence value which queue is mapped.
Egress (State)	Port egress rate limit state <ul style="list-style-type: none"> • Enabled: Egress rate limit is enabled • Disabled: Egress rate limit is disabled
Egress (Rate)	Port egress rate limit value if egress rate state is enabled.

Click "Edit" button to view the Ingress / Egress Port menu.

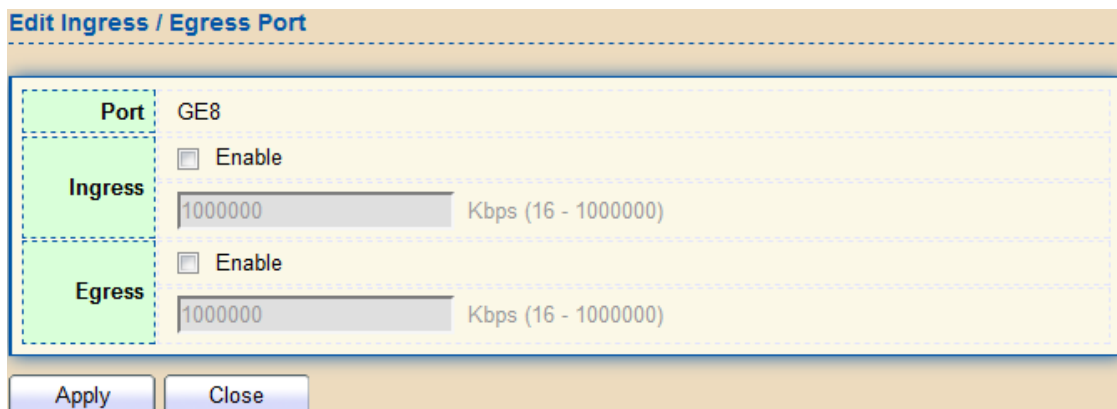

Figure 174 - QoS > Rate Limit > Ingress / Egress Port

Item	Description
Port	Select port list.
Ingress	Set checkbox to enable/disable ingress rate limit. If ingress rate limit is enabled, rate limit value need to be assigned.
Egress	Set checkbox to enable/disable egress rate limit. If egress rate limit is enabled, rate limit value need to be assigned.

4.11.2.2. Egress Queue

Egress rate limiting is performed by shaping the output load.

To display Egress Queue web page, click **QoS > Rate Limit > Egress Queue**.

Egress Queue Table

Entry	Port	Queue 1		Queue 2		Queue 3		Queue 4		Queue 5		Queue 6		Queue 7		Queue 8	
		State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)	State	CIR (Kbps)

Item	Description
Queue 1	Set checkbox to enable/disable egress queue 1 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 2	Set checkbox to enable/disable egress queue 2 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 3	Set checkbox to enable/disable egress queue 3 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 4	Set checkbox to enable/disable egress queue 4 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 5	Set checkbox to enable/disable egress queue 5 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 6	Set checkbox to enable/disable egress queue 6 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.

Queue 7	Set checkbox to enable/disable egress queue 7 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 8	Set checkbox to enable/disable egress queue 8 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.

4.12. Diagnostics

Use the Diagnostics pages to configure settings for the switch diagnostics feature or operating diagnostic utilities.

4.12.1. Logging

4.12.1.1. Property

To enable/disable the logging service, click **Diagnostic > Logging > Property**.

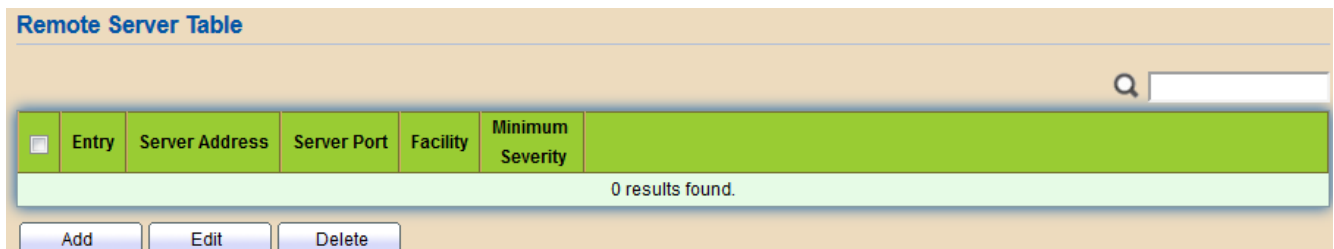

State	<input checked="" type="checkbox"/> Enable
Console Logging	
State	<input checked="" type="checkbox"/> Enable
Minimum Severity	Notice
Note: Emergency, Alert, Critical, Error, Warning, Notice	
RAM Logging	
State	<input checked="" type="checkbox"/> Enable
Minimum Severity	Notice
Note: Emergency, Alert, Critical, Error, Warning, Notice	
Flash Logging	
State	<input type="checkbox"/> Enable
Minimum Severity	Notice
Note: Emergency, Alert, Critical, Error, Warning, Notice	
Apply	

Figure 177 - Diagnostics > Logging > Property

Item	Description
State	Enable/Disable the global logging services. When the logging service is enabled, logging configuration of each destination rule can be individually configured. If the logging service is disabled, no messages will be sent to these destinations.
Console Logging	
State	Enable/Disable the console logging service
Minimum Severity	The minimum severity for the console logging.
RAM Logging	
State	Enable/Disable the RAM logging service.
Minimum Severity	The minimum severity for the RAM logging.
Flash Logging	
State	Enable/Disable the flash logging service.
Minimum Severity	The minimum severity for the flash logging.

4.12.1.2. Remote Server

To configure the remote logging server, click **Diagnostic > Logging > Remote Server**.

Remote Server Table

Entry	Server Address	Server Port	Facility	Minimum Severity
0 results found.				

Figure 178 - Diagnostics > Logging > Remote Server

Item	Description
Server Address	The IP address of the remote logging server.
Server Ports	The port number of the remote logging server.

Facility	The facility of the logging messages. It can be one of the following values: local0,local1, local2, local3, local4, local5, local6, and local7.
Severity	<p>The minimum severity.</p> <ul style="list-style-type: none"> • Emergence: System is not usable. • Alert: Immediate action is needed. • Critical: System is in the critical condition. • Error: System is in error condition • Warning: System warning has occurred • Notice: System is functioning properly, but a system notice has occurred.

4.12.2. Mirroring

To display Port Mirroring web page, click **Diagnostics > Mirroring**

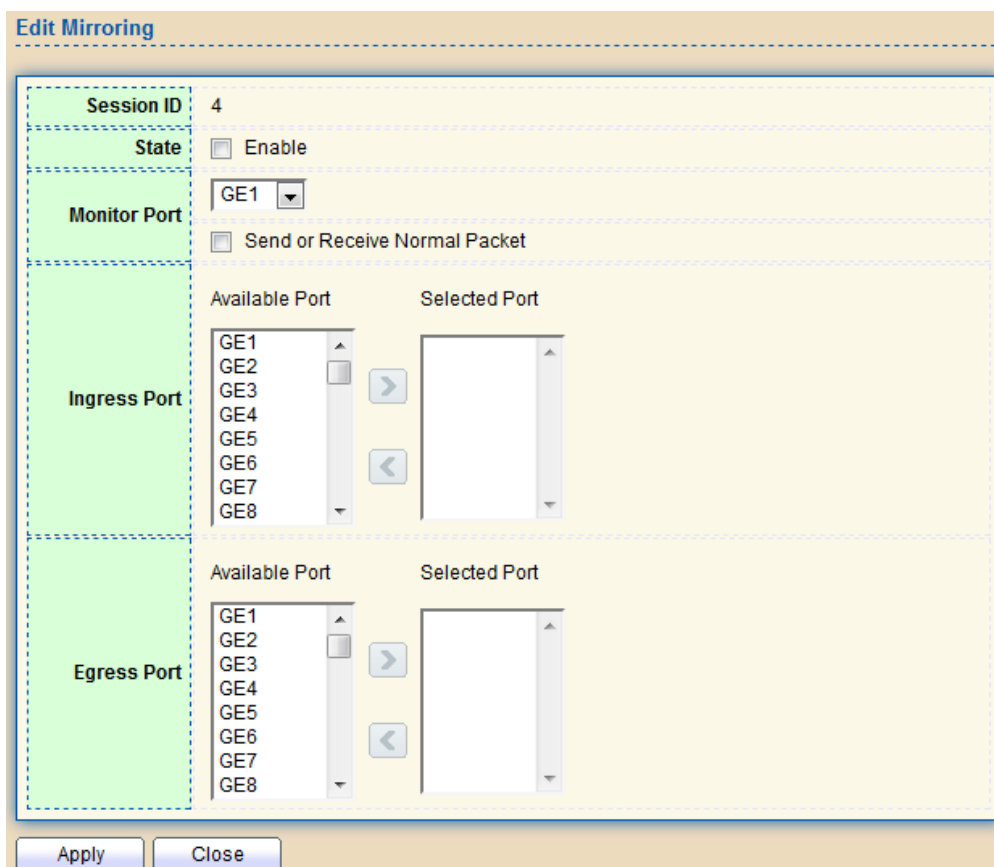

Mirroring Table

	Session ID	State	Monitor Port	Ingress Port	Egress Port
<input type="radio"/>	1	Disabled	---	---	---
<input type="radio"/>	2	Disabled	---	---	---
<input type="radio"/>	3	Disabled	---	---	---
<input type="radio"/>	4	Disabled	---	---	---

Figure 179 - Diagnostics > Mirroring

Item	Description
Session ID	Select mirror session ID.
State	Select mirror session state : port-base mirror or disable <ul style="list-style-type: none"> Enabled: Enable port based mirror Disabled: Disable mirror.
Monitor Port	Select mirror session monitor port, and select whether normal packet could be sent or received by monitor port.
Ingress port	Select mirror session source rx ports.
Egress port	Select mirror session source tx ports.

Click "Edit" button to view the Edit Mirroring menu.

Edit Mirroring

Max	0.0 ms
Average	0.0 ms

Figure 181 - Diagnostics > Ping

Item	Description
Address Type	Specify the address type to “Hostname” or “IPv4” .
Server Address	Specify the Hostname/IPv4 address for the remote logging server.
Count	Specify the numbers of each ICMP ping request.

4.12.4. Traceroute

For trace route functionality, click **Diagnostic > Traceroute**.

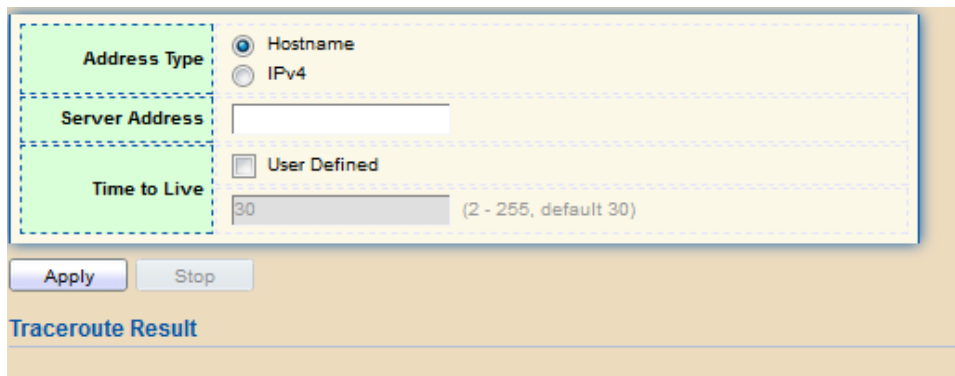

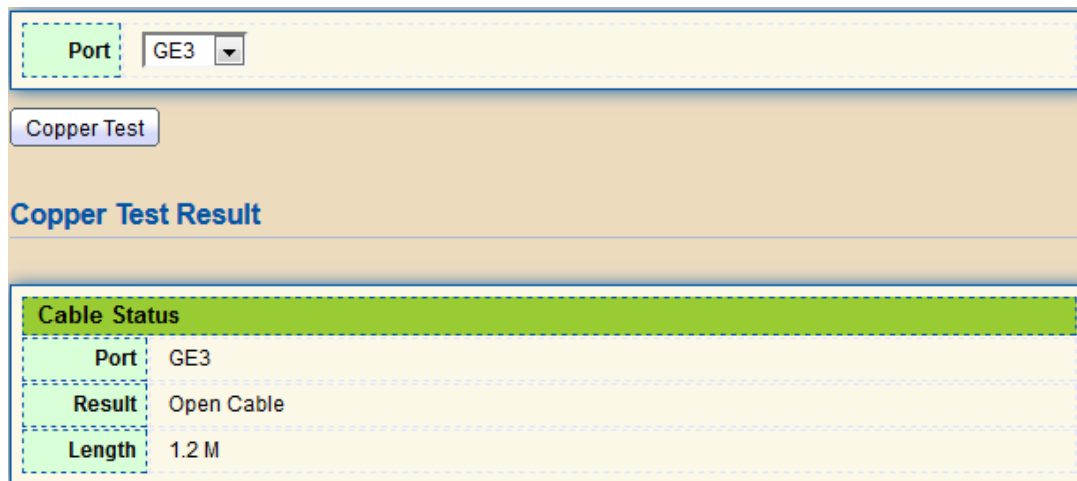

Figure 182 - Diagnostics > Traceroute

Item	Description
Address Type	Specify the address type to “Hostname” or “IPv4” .
Server Address	Specify the Hostname/IPv4 address for the remote logging server.
Time to Live	Specify the max hops of hosts for traceroute.

4.12.5. Copper Test

For copper length diagnostic, click **Diagnostic > Copper Test**.

Cable Status	
Port	GE3
Result	Open Cable
Length	1.2 M

Figure 183 - Diagnostics > Logging>Copper Test

Item	Description
Port	Specify the interface for the copper test.
Copper Test Result	
Port	The interface for the copper test.
Result	<p>The status of copper test. It include:</p> <ul style="list-style-type: none"> ● OK: Correctly terminated pair. ● Short Cable: Shorted pair. ● Open Cable: Open pair, no link partner. ● Impedance Mismatch: Terminating impedance is not in the reference range.
Length	Distance in meter from the port to the location on the cable where the fault was discovered.

4.12.6. Fiber Module

The Optical Module Status page displays the operational information reported by the Small Form-factor Pluggable (SFP) transceiver. Some information may not be available

for SFPs without the supports of digital diagnostic monitoring standard SFF-8472.

To display the Optical Module Diagnostic page, click **Diagnostic > Fiber Module**.

Fiber Module Table

	Port	Temperature (C)	Voltage (V)	Current (mA)	Output Power (mW)	Input Power (mW)	OE Present	Loss of Signal

The access right of a community is defined by a group under advanced mode.
Configure [SNMP Group](#) to associate a group with a community.

Add Edit Delete

Figure 204 - Management > SNMP > Community

Item	Description
Community	The SNMP community name. Its maximum length is 20 characters.
Group	Specify the SNMP group configured by the command snmp group to define the object available to the community.
View	Specify the SNMP view to define the object available to the community.

Access	SNMP access mode <ul style="list-style-type: none"> • Read-Only: Read only. • Read-Wrtie: Read and write.
--------	---

Click "Add" or "Edit" button to view the Add/Edit Community menu.

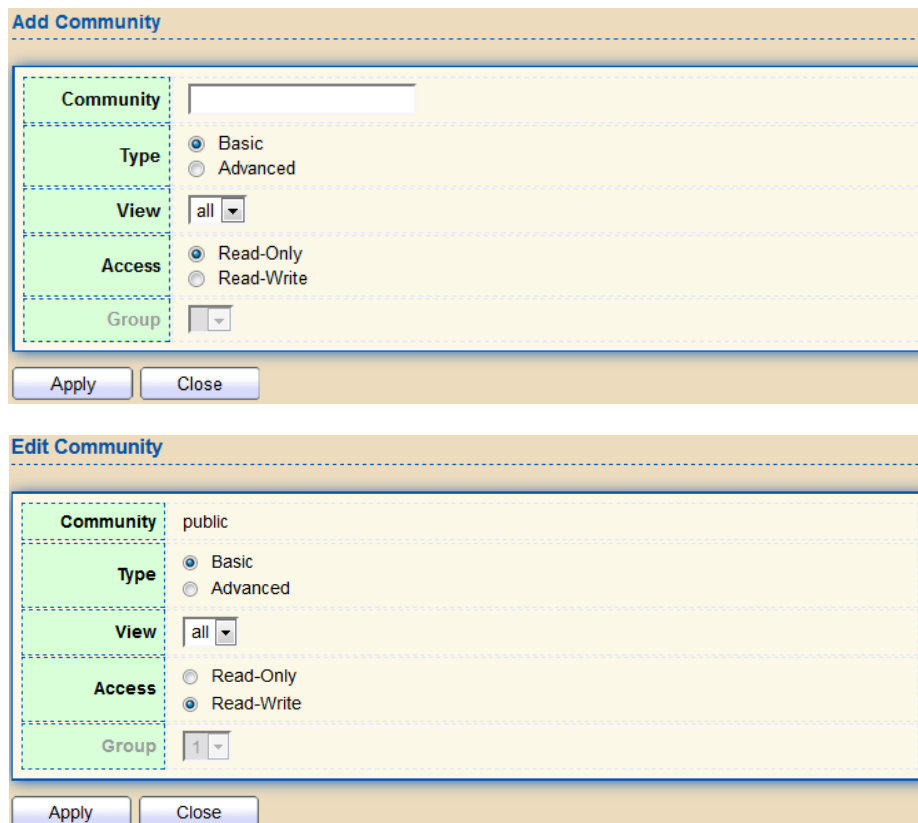

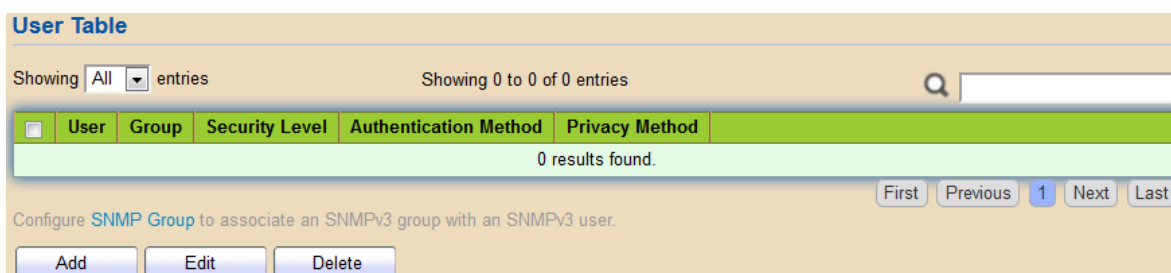

Figure 205 - Management > SNMP > Group > Add/Edit Community

Item	Description
Community	The SNMP community name. Its maximum length is 20 characters.
Type	SNMP Community mode <ul style="list-style-type: none"> • Basic: SNMP community specifies view and access right. • Advanced: SNMP community specifies group.

View	Specify the SNMP view to define the object available to the community.
Access	SNMP access mode <ul style="list-style-type: none"> • Read-Only: Read only. • Read-Wrtie: Read and write.
Group	Specify the SNMP group configured by the command snmp group to define the object available to the community.

4.13.4.4. User

To configure and display the SNMP users, click **Management > SNMP > User**.

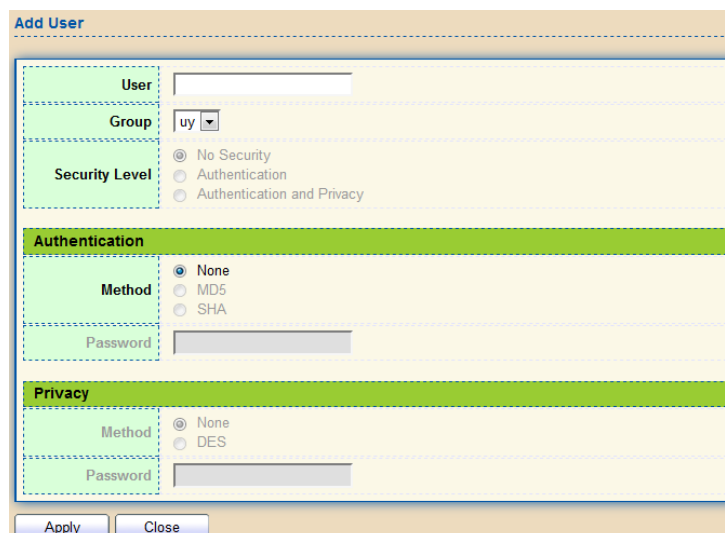

The screenshot shows a web interface titled "User Table". It features a search bar and a table with the following columns: **User**, **Group**, **Security Level**, **Authentication Method**, and **Privacy Method**. Below the table, it states "0 results found." and includes pagination controls: "First", "Previous", "1", "Next", and "Last". At the bottom, there are buttons for "Add", "Edit", and "Delete". A note at the bottom reads: "Configure [SNMP Group](#) to associate an SNMPv3 group with an SNMPv3 user."

Figure 206 - Management > SNMP > User

Item	Description
User	Specify the SNMP user name on the host that connects to the SNMP agent. The max character is 30 characters. For the SNMP v1 or v2c, the user name must match the community name.
Group	Specify the SNMP group to which the SNMP user belongs.

Security Level	<p>SNMP privilege mode</p> <ul style="list-style-type: none"> No Security : Specify that no packet authentication is performed. Authentication: Specify that no packet authentication without encryption is performed. Authentication and Privacy: Specify that no packet authentication with encryption is performed.
Authentication Method	<p>Authentication Protocol which is available when Privilege Mode is Authentication or Authentication and Privacy.</p> <ul style="list-style-type: none"> None: No authentication required. MD5: Specify the HMAC-MD5-96 authentication protocol. SHA: Specify the HMAC-SHA-96 authentication protocol
Privacy Method	<p>Encryption Protocol</p> <ul style="list-style-type: none"> None: No privacy required. DES: DES algorithm

Click "Add" or "Edit" button to view Add/Edit User menu.

The image shows a screenshot of the "Add User" dialog box. It contains the following fields and options:

- User:** A text input field.
- Group:** A dropdown menu with "uy" selected.
- Security Level:** Radio buttons for "No Security" (selected), "Authentication", and "Authentication and Privacy".
- Authentication:** A section header.
- Method:** Radio buttons for "None" (selected), "MD5", and "SHA".
- Password:** A text input field.
- Privacy:** A section header.
- Method:** Radio buttons for "None" (selected) and "DES".
- Password:** A text input field.
- Buttons:** "Apply" and "Close" buttons at the bottom.

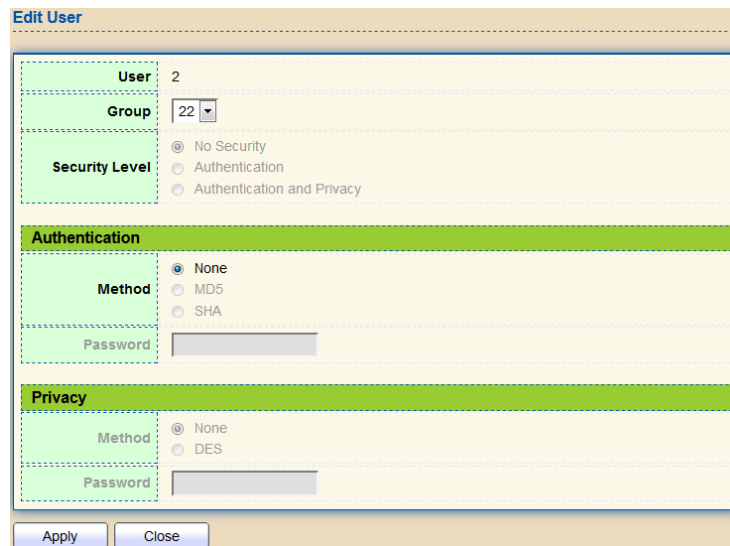

Figure 207 - Management > SNMP > User > Add/Edit User

Item	Description
User	Specify the SNMP user name on the host that connects to the SNMP agent. The max character is 30 characters.
Group	Specify the SNMP group to which the SNMP user belongs.
Security Level	SNMP privilege mode <ul style="list-style-type: none"> No Security : Specify that no packet authentication is performed. Authentication: Specify that no packet authentication without encryption is performed. Authentication and Privacy: Specify that no packet authentication with encryption is performed.
Authentication	
Method	Authentication Protocol which is available when Privilege Mode is Authentication or Authentication and Privacy. <ul style="list-style-type: none"> None: No authentication required. MD5: Specify the HMAC-MD5-96 authentication protocol. SHA: Specify the HMAC-SHA-96 authentication protocol.

Password	The authentication password, The number of character range is 8 to 32 characters.
Privacy	
Method	Encryption Protocol <ul style="list-style-type: none"> • None: No privacy required. • DES: DES algorithm
Password	The privacy password, The number of character range is 8 to 64 characters.

4.13.4.5. Engine ID

To configure and display SNMP local and remote engine ID, click **Management > SNMP > Engine ID**.

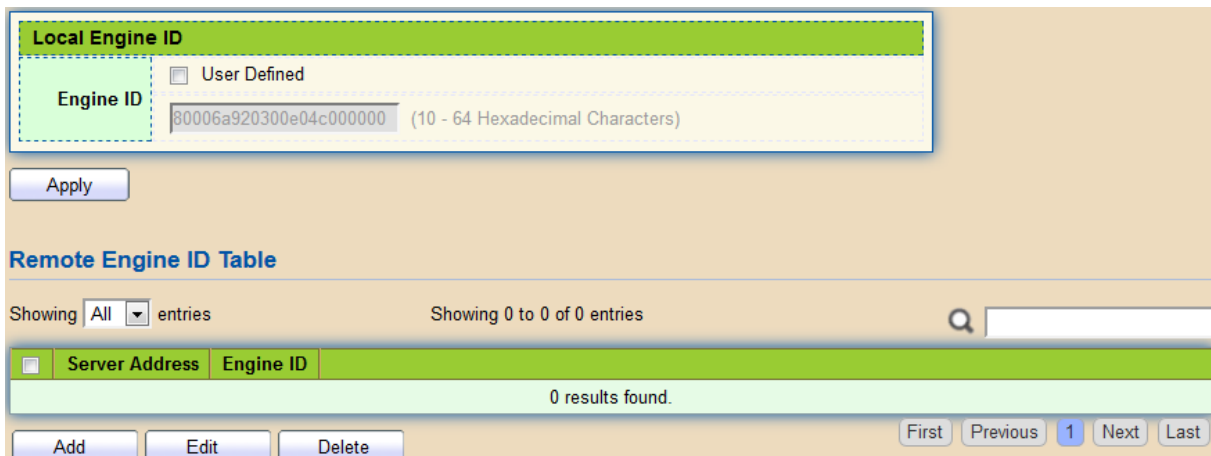

Figure 208 - Management > SNMP > Engine ID

Item	Description
Local Engine ID	

Engine ID	<p>If checked “User Defined” , the local engine ID is configure by user, else use the default Engine ID which is made up of MAC and Enterprise ID.</p> <p>The user defined engine ID is range 10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.</p>
Remote Engine ID Table	
Server Address	Remote host.
Engine ID	Specify Remote SNMP engine ID. The engine ID is range10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.

Click "Add" button to view Add Remote Engine ID menu.

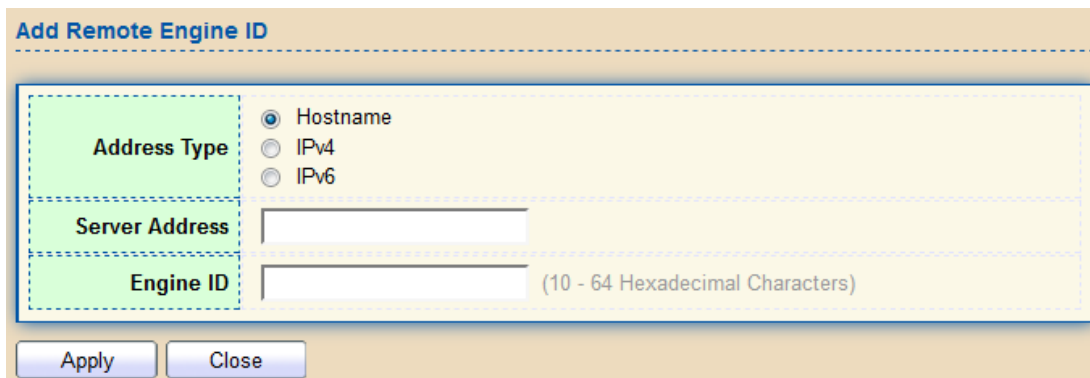

Figure 209 - Management > SNMP > Add Engine ID

Item	Description
Address Type	Remote host address type for Hostname/IPv4/IPv6.
Server Address	Remote host.
Engine ID	Specify Remote SNMP engine ID. The engine ID is range10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.

Click “Edit” button to view Edit Remote Engine ID menu.

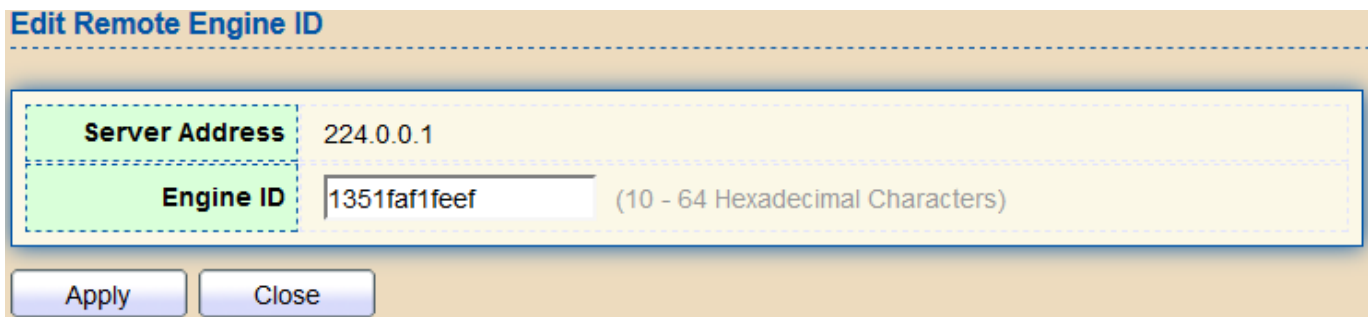

Figure 210 - Management > SNMP > Edit Engine ID

Item	Description
Server Address	Edit Remote host address
Engine ID	Specify Remote SNMP engine ID. The engine ID is range 10 to 64 hexadecimal characters, and the hexadecimal number must be divided by 2.

4.13.4.6. Trap Event

To configure and display SNMP trap event, click **Management > SNMP > Trap Event**.

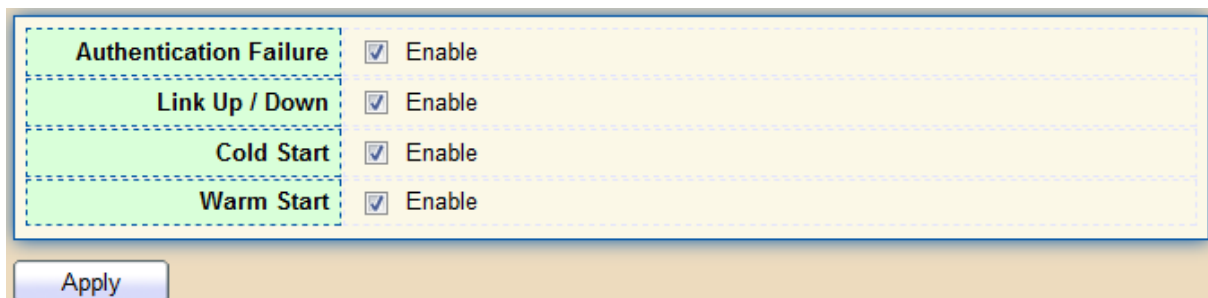

Figure 211 - Management > SNMP > Trap Event

Item	Description
Authentication Failure	SNMP authentication failure trap, when community not match or user authentication password not match.
Link Up/Down	Port link up or down trap.
Cold Start	Device reboot configure by user trap.

Warm Start	Device reboot by power down trap.
------------	-----------------------------------

4.13.4.7. Notification

To configure the hosts to receive SNMPv1/v2/v3 notification, click **Management > SNMP > Notification**.

Notification Table

Showing entries Showing 1 to 2 of 2 entries

<input type="checkbox"/>	Server Address	Server Port	Timeout	Retry	Version	Type	Community / User	Security Level
<input type="checkbox"/>	224.0.0.1	162			SNMPv1	Trap	public	No Security
<input type="checkbox"/>	224.0.0.1	162			SNMPv2	Trap	public	No Security

For SNMPv1,2 Notification, [SNMP Community](#) needs to be defined.
For SNMPv3 Notification, [SNMP User](#) must be created.

Figure 212 - Management > SNMP > Notification

Item	Description
Server Address	IP address or the hostname of the SNMP trap recipients.
Server Port	Recipients server UDP port number.
Timeout	Specify the SNMP informs timeout.
Retry	Specify the retry counter of the SNMP informs.
Version	Specify SNMP notification version <ul style="list-style-type: none"> • SNMPv1: SNMP Version 1 notification. • SNMPv2: SNMP Version 2 notification. • SNMPv3: SNMP Version 3 notification.
Type	Notification Type <ul style="list-style-type: none"> • Trap: Send SNMP traps to the host. • Inform: Send SNMP informs to the host.

Community/User	SNMP community/user name for notification. If version is SNMPv3 the name is user name, else is community name.
UDP Port	Specify the UDP port number.
Timeout	Specify the SNMP informs timeout.
Security Leve	SNMP trap packet security level <ul style="list-style-type: none"> • No Security: Specify that no packet authentication is performed. • Authentication: Specify that no packet authentication without encryption is performed. • Authentication and Privacy: Specify that no packet authentication with encryption is performed.

Click "Add" button to view the Notification menu.

Figure 215 - Management > RMON > Statistics

Item	Description
Port	The port for the RMON statistics.
Bytes Received	Number of octets received, including bad packets and FCS octets, but excluding framing bits.
Drop Events	Number of packets that were dropped.
Packets Received	Number of packets received, including bad packets, Multicast packets, and Broadcast packets.

Broadcast Packets	Number of good Broadcast packets received. This number does not include Multicast packets.
Multicast Packets	Number of good Multicast packets received.
CRC & Align Errors	Number of CRC and Align errors that have occurred.
Undersize Packets	Number of undersized packets (less than 64 octets) received.
Oversize Packets	Number of oversized packets (over 1518 octets) received.
Fragments	Number of fragments (packets with less than 64 octets, excluding framing bits, but including FCS octets) received.
Jabbers	<p>Number of received packets that were longer than 1632 octets. This number excludes frame bits, but includes FCS octets that had either a bad FCS (Frame Check Sequence) with an integral number of octets (FCS Error) or a bad FCS with a non-integral octet (Alignment Error) number. A Jabber packet is defined as an Ethernet frame that satisfies the following criteria:</p> <ul style="list-style-type: none"> • Packet data length is greater than MRU. • Packet has an invalid CRC. • RX error event has not been detected.
Colisions	Number of collisions received. If Jumbo Frames are enabled, the threshold of Jabber Frames is raised to the maximum size of Jumbo Frames.
Frames of 64 Bytes	Number of frames, containing 64 bytes that were received.
Frames of 65 to 127 Bytes	Number of frames, containing 65 to 127 bytes that were received.
Frames of 128 to 225 Bytes	Number of frames, containing 128 to 255 bytes that were received.
Frames of 256 to 511 Bytes	Number of frames, containing 256 to 511 bytes that were received.
Frames of 512 to 1023 Bytes	Number of frames, containing 512 to 1023 bytes that were received.
Frames Greater than 1024 Bytes	Number of frames, containing 1024 to 1518 bytes that were received.
Clear	Clear the statistics for the selected ports.
