## Products Introduction

The DG-GS1528HP/C is a Web Managed POE Switch, It provides 24 10/100/1000Mbps Auto-Negotiation RJ45 POE ports and 2 Combo (RJ45+SFP) +2 Gigabit SFP Ports . It supports the port's full line speed forwarding to ensure the stable transmission of data. This switch can be used as a small local core network or a small & medium-sized LAN network. This product is a Gigabit network management type PoE Switch which can satisfy the full speed of forwarding ports. The machine uses 19"1U and so can be used on the desktop or on the rack. Excellent performance can help you widely use in wireless, monitoring and other fields.

**24 Port 10/100/1000Base-TX with 2 Combo (RJ45+SFP) + 2 Gigabit SFP and 24 PoE+ L2 Web Managed Switch**

## Front Panel

**PWR LED:** The Power LED lights up when the Switch is connected to a power source.

**Link/Act LED:** The Link/Act LED flashes which indicates a network link through the corresponding port. Blinking indicates that the Switch is either sending or receiving data to the port.

**Speed LED (GE only):** The Port Speed LED lights up with solid green indicate the corresponding port is running on 1000M.

**PoE LED:** Blinking indicates that port is running on 100M. Light off indicated that port is running on 10M.

**Green:** Indicates the PoE powered device (PD) is connected and the port supplies power successfully.

**Light off:** Indicates no powered device (PD) connected.

Note: The SFP ports are shared with gigabit RJ45 ports. When SFP port is used, the RJ45 port cannot be used.

Warning: The SFP ports should use UL listed Optical Transceiver product, Rated Laser Class I. 3.3Vdc.

## Rear Panel

**Power:** The power port is where to connect the AC power cord.

**Switch:** Used to connect the power supply.

**Fuse:** Prevent affect of power grid from equipment short circuit. (containing a spare fuse)

# Hardware Installation

## Hardware installation

This chapter provides unpacking and installation information for the Web Managed PoE switch.

### First step: open a seal

Open the shipping carton and carefully unpack its contents. Please consult the packing list located in the User Manual to make sure all items are present and not damaged.

- Switch 1pcs
- AC power cord 1pcs
- Rubber feet 4pcs
- Screws 6pcs
- Mounting brackets 2pcs
- User manual/CD 1pcs

If any item is found missing or damaged, please contact the local reseller for replacement.

### Second step: switch installation

For safe switch installation and operation, it is recommended that you:

- Visually inspect the power cord to see that it is secured fully to the AC power connector.
- Make sure that there is proper heat dissipation and adequate ventilation around the switch.
- Do not place heavy objects on the switch.

### Desktop or Shelf Installation

When installing the switch on a desktop or shelf, the rubber feet included with the device must be attached on the bottom at each corner of the device's base. Allow enough ventilation space between the device and the objects around it.

### Rack Installation

The switch can be mounted in an EIA standard size 19-inch rack, which can be placed in a wiring closet with other equipment. To install, attach the mounting brackets to the switch's side panels (one on each side) and secure them with the screws provided (please note that these brackets are not designed for palm size switches).

Then, use the screws provided with the equipment rack to mount the switch in the rack.

Please be aware of following safety Instructions when installing:

- A) Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (T<sub>ma</sub>) specified by the manufacturer.
- B) Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.
- C) Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.
- D) Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.
- E) Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips)."

### Third step: Plugging in the AC Power Cord

You can connect AC power supply cord to switch back and the other side connect the power outlet. (power outlet might as well grounding and support over voltage protection)

Warning: Do not turn on the power switch before power cables are connected. Power surge may cause damage to the Switch.

Warning: The installation instructions clearly state that the ITE is to be connected only to PoE networks without routing to the outside plant.

### **Power failure**

As a precaution, the switch should be unplugged in case of power failure. When power is resumed, plug the switch back in.

### 3. Getting Started

This chapter introduces the management interface of Web Managed PoE switch.

#### **Management Option**

The Web Managed PoE switch can be managed through any port on the device by using the Web-based management.

Each switch must be assigned its own IP address, which is used for communication with Web-Based Management or a SNMP network manager. The PC should have an IP address in the same range as the switch.

Please refer to the following installation instructions for the Web-based Management.

#### **Using Web-based Management**

After a successful physical installation, you can configure the Switch, monitor the network status, and display statistics using a web browser.

#### **Supported Web Browsers**

The embedded Web-based Management currently supports the following web browsers:

Internet Explorer 6 or higher version

Netscape 8 or higher version

Mozilla

Firefox 1.5/2.0 or higher version

#### **Connecting to the Switch**

You will need the following equipment to begin the web configuration of your device:

1. A PC with a RJ-45 Ethernet connection
2. A standard Ethernet cable

Connect the Ethernet cable to any of the ports on the front panel of the switch and to the Ethernet port on the PC.

#### **Login Web-based Management**

In order to login and configure the switch via an Ethernet connection, the PC must have an IP address in the same subnet as the switch. For example, if the switch has an IP address of **192.168.0.1**, the PC should have an IP address of **192.168.0.X** (where x is a number between 2 ~ 254), and a subnet mask of **255.255.255.0**. Open the web browser and enter **192.168.0.1**(the factory-default IP address) in the address bar. Then press <Enter>.

Open the web browser and enter **192.168.0.1**(the factory-default IP address) in the address bar. Then press <Enter>.

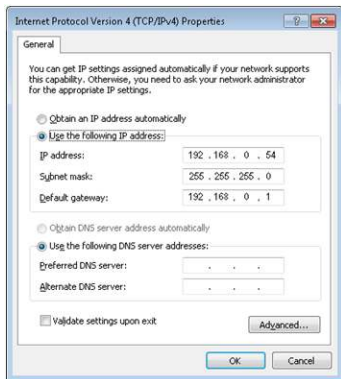

**Enter the IP address in the web browser**

**NOTE:** The switch's factory default IP address is 192.168.0.1 with a subnet mask of 255.255.255.0

To log in to the switch, the IP address of your PC should be set in the same subnet as that of the switch. The IP address is 192.168.0.x ("x" is any number from 2 to 254). Subnet Mask is 255.255.255.0.

When the following logon dialog box appears, enter the password then click **OK**. By default, the username is **admin** and the password is **admin**.

Logon Dialog Box

## 1. WEB page elements

Shown in Figure 2, WEB page is mainly composed of three parts: title page, navigation tree page and main page

Figure 2

**Title page** is Used to display the logo

**Main page** is used to display the user from the navigation tree, select the page

## Limited Lifetime Warranty

This Product is covered under DIGISOL Limited Lifetime Warranty program backed by DIGISOL Service Center. To avail this Limited Lifetime Warranty offer, customer needs to contact DIGISOL's Technical Assistance Center for the same. You may be asked to provide proof of purchase of product for warranty claim of defective product. Please refer website [www.digisol.com](http://www.digisol.com) for the detailed support terms & conditions and support process.

### Warranty Policy

1. **Hardware Warranty** : Hardware warranty period shall be limited up to Three years. External Power Adapter shall carry One year warranty only against manufacturing defects. Any repair or replacement will be rendered by DIGISOL at its Service Center only.
2. **Software Warranty** : DIGISOL issues this Limited Software Warranty that the software portion of the product ("Software") will substantially conform to DIGISOL's then current functional specifications for the software, as set forth in the applicable documentation, from the date of original retail purchase of the Software for a period of one year ("Software Warranty period"), provided that the Software is properly installed on approved hardware and operated as contemplated in its documentation.
3. **Governing Law**: This warranty shall be governed by Indian Laws.
4. **Limited Lifetime Warranty** shall subject to the terms & conditions specified in the DIGISOL PRODUCT WARRANTY policy displayed on [www.digisol.com](http://www.digisol.com)
5. To avail and activate warranty for your product.  
Kindly register your product by calling us @18002093444
